Timber Construction Manual Thomas Herzog, Julius

Natterer, Roland Schweitzer, Michael Volz, Wolfgang Winter, 2012-12-10 with some 600 photos and 4000 drawings and plans the Timber Construction Manual is a comprehensive and indispensable reference work in the specialist literature on timber. It looks at all types of timber and timber materials also presenting detailed information on the current norms and standards. Chapters cover the basic principles of working with timber providing detailed information on subjects such as heat noise insulation fire protection treatment. The significance of timber with particular reference to ecology is also investigated. Timber as a load bearing material is considered and topics such as new methods of joining transport and montage are documented. The second part of the volume presents a large number of built examples which feature some classic structures but focus chiefly on more recent buildings. The spectrum presented ranges from heavy load bridges to multi storey residential buildings. The second part of the examples looks specifically at topics such as facades building skins etc.

Façades Ulrich Knaack, Tillmann Klein, Marcel Bilow, Thomas Auer, 2014-09-05 Introduction to building facades as revised edition. Facades determine the appearance of a building. Hence they constitute a major element in architecture. At the same time the building's envelope has important functions to fulfil such as lighting weatherproofing thermal insulation load transfer and sound insulation. Over the past 15 years facades have become increasingly complex intelligent facades for instance adapt to changing climate and lighting conditions. Newly developed materials and technologies have broadened the scope of facade functions. This book demonstrates the principles of facade construction. It systematically describes the most common types such as post and beam facade curtain wall corridor facade or double facade and provides guidelines for appropriate detailing. Numerous drawings made especially for the book explain the principles of different types of facades which are then illustrated with built examples. For this second edition all chapters were revised and all four examples in the case studies chapter were replaced by new material. The new chapter Future Facades offers insights into what's next.
