- 7 The diameter of a neutral helium atom = 1×10^2 pm. Suppose that we could line up helium atoms side by side in contact with one another. Approximately how many atoms would it take to make the distance from end to end 1 cm?

First, convert 1 cm to picometers. $1 \text{ cm} \times \frac{0.01 \text{ m}}{1 \text{ cm}} \times \frac{1 \text{ pm}}{1 \times 10^{-12} \text{ m}} = 1 \times 10^{10} \text{ pm}$

$$? \text{ He atoms} = (1 \times 10^{10} \text{ pm}) \times \frac{1 \text{ He atom}}{1 \times 10^2 \text{ pm}} = 1 \times 10^8 \text{ He atoms}$$

- 11 What do we call atoms of the same elements with different mass numbers? Isotopes.

- 13 What is the mass number of an iron atom that has 28 neutrons?

For iron, the atomic number Z is 26. Therefore the mass number A is: $A = 26 + 28 = 54$

- 15 For the following atoms, determine the number of protons and neutrons.

Isotope	^3_2He	^4_2He	$^{24}_{12}\text{Mg}$	$^{25}_{12}\text{Mg}$	$^{48}_{22}\text{Ti}$	$^{79}_{35}\text{Br}$	$^{195}_{78}\text{Pt}$
No. Protons	2	2	12	12	22	35	78
No. Neutrons	1	2	12	13	26	44	117

- 17 Give the symbol for the following isotopes:

(a) $Z = 11$ $A = 23$ $^{23}_{11}\text{Na}$ (b) $Z = 28$ $A = 64$ $^{64}_{28}\text{Ni}$

- 20 State two differences between a metal and a nonmetal.

Metals conduct heat and electricity, are shiny & malleable; nonmetals are poor conductors, generally dull and brittle.

- 21 Write the names and symbols for four elements in each of the following categories:

(a) nonmetal: phosphorous P, bromine Br, neon, Ne, carbon C

(b) metal: iron Fe, cesium Cs, iridium, Ir, praseodymium Pr

(c) metalloid: silicon Si, germanium Ge, boron B, antimony Sb

- 22 Define, with two examples, the following terms:

(a) Alkali metals: (1st column) Sodium, rubidium;

(b) alkaline earth metals: (2nd column) barium, beryllium;

(c) halogens: (7th column) fluorine, iodine;

(d) noble gases: (8th column) xenon, krypton

- 27 What is the difference between an atom and a molecule?

An atom is the smallest representative unit of an element.

A molecule is the smallest representative unit of a (non-ionic) compound, composed of two or more atoms chemically bonded.

- 28 What are allotropes? Allotropes are different physical forms of the same element.

Examples? graphite and diamond are two allotropes of carbon.

Food Production and

Nature Conservation Iain J. Gordon, Herbert H.T. Prins, Geoff R. Squire, 2016-11-25 Feeding the world's growing human population is increasingly challenging especially as more people adopt a western diet and lifestyle. Doing so without causing damage to nature poses an even greater challenge. This book argues that in order to create a sustainable food supply whilst conserving nature, agriculture and nature must be reconnected and approached together. The authors demonstrate that while the links between nature and food production have to some extent already been recognized, until now the focus has been to protect one from the impacts of the other. Instead, it is argued that nature and agriculture can and should work together and ultimately benefit from one another. Chapters describe efforts to protect nature through globally connected protected area systems and illustrate how farming methods are being shaped to protect nature within agricultural systems. The authors also point to many ways in which nature benefits agriculture through the ecosystem services it provides. Overall, the book shows that nature conservation and food production must be considered as equally important components of future solutions to meet the global demand for food in a manner that is sustainable for both the human population and the planet as a whole.

Cyanotype Toning Annette Golaz, 2021-09-30 Cyanotype is the most accessible and frequently used of all the alternative photographic processes. When utilized properly, it has the potential to rival other processes when it comes to detail and tonal range, but its Prussian blue color isn't always suitable for the final photograph. Throughout history, cyanotype prints have been toned not only with various and at times hazardous chemicals but also with more natural ingredients like tea and coffee. Since the cyanotype itself is non-toxic, Cyanotype Toning will champion an innovative process developed by the author of toning cyanotypes with natural material. This process, which is easy and reliable, offers a much broader range of possible colors and even beautiful black and whites. Even duotone or tricolor prints can be attained. The book consists of two parts. Part One is a step-by-step how-to section including all the information that a student at any level needs to achieve a successfully toned print. Easy-to-understand background information is provided on how and why the process works so that readers can venture on their own into the world of natural colors. The first part also has a detailed section on all the factors that can influence the outcome, like paper choice, water quality, properties of the plants, temperature of the bath, and the duration of the toning. Part Two is devoted to contemporary artists who have explored toning with botanicals and integrated the process into their creative practice. The book includes a list of equipment and supplies needed, in-depth information about useful plants and the specific properties that make them suitable for toning cyanotypes, concise step-by-step instructions for printing cyanotypes successfully, a chart of more than 60 tested papers with recommendations on paper choice, step-by-step generic instructions on toning with botanicals, troubleshooting toning with botanicals, more detailed recipes for specific colors with information

about the plants Step by step instructions on how to print duotone and tricolor prints A range of creative ideas on how to use the process in classrooms and with different age groups A comprehensive list of more than 380 tested parts of plants and possible color outcomes Using botanicals to tone cyanotypes broadens the color spectrum enlarges creative possibilities and makes the cyanotype process even more versatile The process is not cut and dried science but a limitless field for discovery and surprises Cyanotype Toning provides accessible information and instructions for readers at all levels It is comprehensive and explanatory so that readers can expand on the subject on their own as did the contemporary artists who share their experiences and the works they have created using this innovative toning process Reports from Commissioners Great
