Collineations and Conic Sections Christopher Baltus, 2020-09-01 This volume combines an introduction to central collineations with an introduction to projective geometry set in its historical context and aiming to provide the reader with a general history through the middle of the nineteenth century Topics covered include but are not limited to The Projective Plane and Central Collineations The Geometry of Euclid's Elements Conic Sections in Early Modern Europe Applications of Conics in History With rare exception the only prior knowledge required is a background in high school geometry As a proof based treatment this monograph will be of interest to those who enjoy logical thinking and could also be used in a geometry course that emphasizes projective geometry

Solutions of the Examples in an Elementary Treatise on Conic Sections Charles Smith, 1898 *An Elementary Treatise on Conic Sections* Charles Smith, 1884 **A Treatise on Conic Sections** George Salmon, 2021-03-10 The classic book on the subject covering the whole ground and full of touches of genius Mathematical Association of America **A Treatise on Conic Sections** George Salmon, 1911 **The Doctrine of Germs, Or, The Integration of Certain Partial Differential Equations which Occur in Mathematical Physics** Samuel Earnshaw, 1881 **Geometry of Curves** J.W. Rutter, 2018-10-03 Interest in the study of geometry is currently enjoying a resurgence understandably so as the study of curves was once the playground of some very great mathematicians However many of the subject's more exciting aspects require a somewhat advanced mathematics background For the fun stuff to be accessible we need to offer students an introduction with modest prerequisites one that stimulates their interest and focuses on problem solving Integrating parametric algebraic and projective curves into a single text Geometry of Curves offers students a unique approach that provides a mathematical structure for solving problems not just a catalog of theorems The author begins with the basics then takes students on a fascinating journey from conics higher algebraic and transcendental curves through the properties of parametric curves the classification of limas envelopes and finally to projective curves their relationship to algebraic curves and their application to asymptotes and boundedness The uniqueness of this treatment lies in its integration of the different types of curves its use of analytic methods and its generous number of examples exercises and illustrations The result is a practical text almost entirely self contained that not only imparts a deeper understanding of the theory but inspires a heightened appreciation of geometry and interest in more advanced studies

Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin, 2008-03-12 Here at last is the massively updated and augmented second edition of this landmark encyclopedia It contains approximately 1000 entries dealing in depth with the history of the scientific technological and medical accomplishments of cultures outside of the United States and Europe The entries consist of fully updated articles together with hundreds of entirely new topics This unique reference work includes intercultural articles on broad topics such as mathematics and astronomy as well as thoughtful philosophical articles on concepts and ideas related to the study of non
