Design Guide for Circular Hollow Section (CHS) Joint Under Predominantly Static Loading J. Wardenier, Y. Kurobane, J. A. Packer, 2003 *Cold-formed Tubular Members and Connections* Greg Hancock, Tim J Wilkinson, Xiao-Ling Zhao, 2005-08-17 Cold formed structural members are being used more widely in routine structural design as the world steel industry moves from the production of hot rolled section and plate to coil and strip often with galvanised and or painted coatings Steel in this form is more easily delivered from the steel mill to the manufacturing plant where it is usually cold rolled into open and closed section members This book not only summarises the research performed to date on cold form tubular members and connections but also compares design rules in various standards and provides practical design examples **Tubular Structures IX** Puthli, 2001-01-01 A reference for architects and engineers this work covers themes on architecture case studies and the application and strengths of tubular beams *Tubular Structures* Paul Grundy, Alan Holgate, Bill Wong, 2021-10-06 Tubular structures remain a source of architectural inspiration and practical solutions to difficult performance specifications New developments are covered in this text which contains papers on design innovations and applications presented at an international symposium held in Australia in 1994 **Design Guide for Rectangular Hollow Section (RHS) Joints Under Predominantly Static Loading**, 2009 **Tubular Structures XIV** Leroy Gardner, 2012-08-24 Tubular Structures XIV contains the latest scientific and engineering developments in the field of tubular steel structures as presented at the 14th International Symposium on Tubular Structures ISTS14 Imperial College London UK 12-14 September 2012 The International Symposium on Tubular Structures ISTS has a long standing reputation for *Design Guide for Structural Hollow Sections in Mechanical Applications* J. Wardenier, D. Dutta, N. Yeomans, A. J. Packer, 2003 **Design Guide for Rectangular Hollow Section (RHS) Joints Under Predominantly Static Loading** Jeffrey A. Packer, 1992 This design guide deals with the static strength criteria for various uniplanar and multiplanar welded and bolted connections of square and rectangular hollow sections with emphasis on the connection behaviour and governing connection parameters *Design Guide for Structural Hollow Section Column Connections* Y. Kurobane, J. A. Packer, J. Wardenier, N. Yeomans, 2004 **Structures with Hollow Sections** Dipak Dutta, 2002-06-28 Structures using hollow sections are a special area within steel construction and are often ignored as such in publications This work represents a comprehensive treatment of the whole field from manufacture right up to useful applications in steel construction *Design Guide for Structural Hollow Sections in Mechanical Applications* Jaap Wardenier, 1995 **Design Guide for Structural Hollow Section Column Connections** Yoshiaki Kurobane, 2004 **Design Guide for Structural Hollow Sections Columns Exposed to Fire** L. Construction,1992 Contribution on the behavior of welded joints to metallic structural elements with tubular section
Dr.-Ing. Patrick Heinemann,2023-02-22 Doctoral Thesis Dissertation from the year 2022 in the subject Engineering Civil Engineering grade Summa cum laude language English abstract Steel structures which are made of hollow section profiles are mainly used for construction structures There are many fields of applications for structures made of hollow section profiles Hollow section profiles are lightweight and have got a high resistance to compression which is an advantage for column structures The most common profile types have squared or circular hollow cross sections Connecting two or more pipes by welding the joints have got different shapes These joints are part of trusses or columns with a tree shaped optic The standards have got restrictions regarding the geometry material or load cases By choosing a node which is excluded in the standards designing engineers have to create their own models This thesis is about the designing of a Y shaped steel joint full overlapped on top connection which is not defined in current standards up to the time the thesis is created In this thesis only uniplanar joints are investigated A special focus is on the welding line which has got a three dimensional shape The aim is to figure out the influence on the inclination angle between the two members on the resistance of the joint Beside this the profile shape and profile thickness vary to see the differences in their resistance Square and circular hollow section profiles are in focus To analyse the behaviour of the different steel joints a numerical and experimental investigation is executed Design charts are created as a medium for designing engineers to calculate the ultimate resistance in the elastic and plastic state depending on the steel profile thickness and inclination angle The structure of the thesis is split into four main parts Firstly there is an explanation of the general topic with its difficultness Secondly there is the state of the art presentation of literature and standards in this range Thirdly there is a numerical analysis of the joints The basement of the numerical studies is detailed in pre studies which explain and compare different mesh types or geometrical variations Fourthly there is an experimental verification of the numerical tests It is figured out if the inclination angle increase the resistance of the steel joint will decrease significantly This effect is non linear Beside this it is found that the full overlapped joint with the squared profile has got a higher resistance than a comparable joint with a similar circular hollow section **Designers' Guide to EN 1993-1-1** Leroy Gardner,D. A. Nethercot,2005 After some 25 years in preparation the key parts of EN 1993 1 1 Eurocode 3 Design of steel structures General rules and rules for buildings have now been finalised Eurocode 3 covers many forms of steel construction and provides the most comprehensive and up to date set of design guidance currently available Throughout this book concentrates on the most commonly encountered aspects of structural steel design with an emphasis on the situation in buildings Much of its content is therefore devoted to the provisions of the Part 1 1 General rules and rules for buildings of EN 1993 This is however supplemented by material on loading joints and cold formed design For each of the principal aspects covered the book provides background to the structural behaviour explanation of the codified treatment including departure from existing practice BS 5950 and numerous worked examples This Guide should serve as the primary

point of reference for designing steel structures to Eurocode 3 BOOK JACKET *Design Guide for Fabrication, Assembly and Erection of Hollow Section Structures* A. Dutta, J. Wardenier, N. Yeomans, K. Sakae, Ö Bucak, J. A. Packer, 2003 **Design Guide for Rectangular Hollow Section (rhs) Joints Under Predominantly Static Loading** J. A. Packer, J. Wardenier, Y. Kurobane, 2003
