

L'EFFET DE SERRE NATUREL ET SES PERTURBATIONS PAR LES ACTIVITÉS HUMAINES

Les rayons solaires fournissent de l'énergie à la Terre. Une partie est directement ou indirectement réflétee vers l'espace tandis que la majorité est absorbée par l'atmosphère ou la surface du globe. La température relativement clémente à la surface de la Terre est due à la présence de GES qui renvoient vers le sol la majorité du rayonnement de surface.

Face au risque sanitaire Michel Setbon, 2021-05-04

La perception du risque est devenue en quelques décennies un sujet majeur de connaissance théorique et pratique s'affirmant comme un élément central de l'analyse du risque et encore plus actuellement avec l'émergence d'un nouveau risque global pandémique de la Covid 19 Face à l'expertise organisée par les pouvoirs publics chacun réagit travers sa perception du risque qui est une valuation subjective fondée sur ses croyances son expérience et surtout sur ses motions Parmi ces motions la peur est le principal déterminant des comportements face au risque la croisée des sciences sociales de l'psychiatrie et de la santé publique cet ouvrage a pour objectif d'en poser les fondamentaux d'en analyser les impacts et d'

aider la prise de décision. Il s'appuie sur les principaux travaux et recherches internationales publiés des exemples concrets VIH, vache folle, chikungunya, grippe A H1N1 et un chapitre conclusif spécifiquement sur la Covid 19. Ce titre il s'adresse aux professionnels et décideurs de santé publique, aux médecins experts et chercheurs travaillant sur les risques de toutes natures, mais également tous ceux qui souhaitent disposer de connaissances sur les dynamiques des comportements face au risque.

Le changement climatique n'est plus ce qu'il était Judith Curry, 2024-11-13. La climatologue Judith Curry montre dans ce livre comment la science du climat a été pervertie par la politique. Elle explique en premier lieu pourquoi le concept de consensus pose problème. Certes, la très grande majorité des climatologues sont d'accord sur certains points : hausse de la température moyenne et impact du dioxyde de carbone. Mais les voix officielles oublient de dire que les scientifiques sont aussi en désaccord ou ignorants sur de nombreux autres aspects de la question et en particulier sur la part du réchauffement imputable à la variabilité naturelle du climat : le des océans, du soleil et des volcans. Selon Judith Curry, ce pseudo-consensus dissimule une autre question : l'augmentation de la température globale formulée par le GIEC en 2013 se sont révélées exagérées. En 2023, la rhétorique alarmiste s'est déplacée vers les événements météorologiques extrêmes. Or, il n'y a pas de preuves du rôle des missions humaines dans la hausse de leur fréquence ou de leur intensité. Après avoir vu la variabilité naturelle de la définition du changement climatique, il s'agit donc désormais de ne pas trop mettre en avant la question de la température moyenne qui pourrait ne pas être aussi dangereuse qu'il paraît. Le changement climatique n'est évidemment plus tout ce qu'il était. Pour l'auteur, l'usage de ce consensus tronqué empêche une bonne valuation des risques réels qui sont surtout régionaux. En restant aveugle aux incertitudes, il permet aussi aux médias et aux responsables politiques de simplifier outrageusement la question pour adopter des solutions simplistes qui non seulement n'endiguent pas le réchauffement, mais surtout nuisent à la prospérité et au bien-être des populations. Judith A. Curry est une climatologue américaine, ex-présidente de la School of Earth and Atmospheric Sciences, école des sciences de la Terre et de l'atmosphère au Georgia Institute of Technology. Elle a participé de nombreux travaux de recherche dans le cadre de l'Organisation météorologique mondiale.

Dimension stratégique du changement climatique en Méditerranée occidentale d'ici 2050 Coustillerie Jean-François, 2017-10-15. Par-delà les crises et les conflits, les questions économiques et le risque démographique et migratoire, les questions climatiques et l'avenir de l'eau demeurent les grands problèmes qui vont sous-tendre la sécurité collective et individuelle en Méditerranée. Les

experts réunis ici analysent les conséquences du réchauffement climatique ayant une portée stratégique en Méditerranée et proposent les voies et moyens susceptibles de les contenir **Le Réchauffement Climatique** Amor Abbassi, 2021-01-23

Preamble Le réchauffement climatique ou planétaire est le phénomène d'augmentation des températures moyennes océaniques et atmosphériques du fait d'missions de gaz effet de serre excessives. Ces missions dépassent en effet la capacité d'absorption des océans et de la biosphère et augmentent l'effet de serre lequel piège la chaleur à la surface terrestre. Le terme réchauffement climatique désigne plus communément le réchauffement mondial observé depuis le début du XX^e siècle tandis que l'expression changement climatique désigne plutôt les épisodes de réchauffement ou refroidissement d'origine naturelle qui se sont produits avant l'ère industrielle. En 1988, l'ONU crée le Groupe d'experts intergouvernemental sur l'évolution du climat (GIEC) pour synthétiser les études scientifiques sur le climat. Dans son quatrième rapport datant de 2007 auquel ont participé plus de 2 500 scientifiques de 130 pays, le GIEC affirme que le réchauffement climatique depuis 1950 est très probablement dû à l'augmentation des gaz effet de serre d'origine anthropique liés aux activités humaines. Les conclusions du GIEC ont été approuvées par plus de quarante sociétés scientifiques et académiques des sciences y compris l'ensemble des académies nationales des sciences des grands pays industrialisés. Le degré de certitude est passablement probable dans le cinquième rapport de 2014. Les dernières projections du GIEC sont que la température de surface du globe pourrait croître de 1,1 à 6,4 °C supplémentaires au cours du XXI^e siècle. Les différences entre ces projections proviennent des sensibilités différentes des modèles pour les concentrations de gaz effet de serre et des différents scénarios d'émissions futures. La plupart des études ont choisi 2100 comme horizon mais le réchauffement devrait se poursuivre au-delà car même si toutes les missions s'arrêtaient soudainement les océans ayant déjà stocké beaucoup de chaleur, des puits de carbone sont restaurés et la durée de vie du dioxyde de carbone et des autres gaz effet de serre dans l'atmosphère est longue. Des incertitudes subsistent sur l'ampleur et la géographie du réchauffement futur du fait de la précision des modèles de l'imprévisibilité du volcanisme mais aussi des comportements tactiques et individuels présents et futurs variables. Les enjeux socio-économiques, politiques, sanitaires, environnementaux voire géopolitiques ou moraux tant majeurs, ils suscitent des débats nombreux à l'échelle internationale ainsi que des controverses. Néanmoins, depuis 2000, un consensus émerge sur le fait que les effets du réchauffement se font déjà sentir de manière significative qu'ils devraient s'accroître moyen et long terme et qu'ils seraient irréversibles sauf actions concertées locales aussi bien que planétaires.
