based threshold on intensity function and provides a threshold to declare the system component as high failure rate components HFRCs Identifying a system as HFRCs is an important task but for an industry dealing with critical systems preventing the system from being HFRC is more important since the risk involved in such systems would be very high Thus the book presents a progressive maintenance policy PMP for repairable systems Focusses on qualitative analysis of repair quality Assuming repair quality as a subjective variable the authors have presented various factors that affect the repair quality most and modeled their interdependency using Bayesian networks BN Audience Professional reliability engineers reliability administrators consultants managers and post graduate students in engineering schools The book belongs to any engineering technical and academic institution concerned with manufacturing production aviation defense and software industries
