Technological Change and the Future of Warfare

Michael E. O'Hanlon, 2011-04-01 In light of the spectacular performance of American high technology weapons in the 1991 Persian Gulf War as well as the phenomenal pace of innovation in the modern computer industry many defense analysts have posited that we are on the threshold of a revolution in military affairs RMA The issue has more than semantic importance Many RMA proponents have begun to argue for major changes in Pentagon budgetary priorities and even in American foreign policy more generally to free up resources to pursue a transformed U S military and to make sure that other countries do not take advantage of the purported RMA before we do This book takes a more measured perspective Beginning

with a survey of various types of defense technologies it argues that while important developments are indeed under way most impressively in electronics and computer systems the overall thrust of contemporary military innovation is probably not of a revolutionary magnitude Some reorientation of U S defense dollars is appropriate largely to improve homeland defense and to take advantage of the promise of modern electronics systems and precision guided munitions But radical shifts in U S security policy and Pentagon budget priorities appear unwarranted especially if those shifts would come at the expense of American military engagement in overseas defense missions from Korea to Iraq to Bosnia

The Culture of Military Innovation Dima Adamsky, 2010-01-27 This book studies the impact of cultural factors on the course of military innovations One would expect that countries accustomed to similar technologies would undergo analogous changes in their perception of and approach to warfare However the intellectual history of the Revolution in Military Affairs RMA in Russia the US and Israel indicates the opposite The US developed technology and weaponry for about a decade without reconceptualizing the existing paradigm about the nature of warfare Soviet new theory of victory represented a conceptualization which chronologically preceded technological procurement Israel was the first to utilize the weaponry on the battlefield but was the last to develop a conceptual framework that acknowledged its revolutionary implications Utilizing primary sources that had previously been completely inaccessible and borrowing methods of analysis from political science history anthropology and cognitive psychology this book suggests a cultural explanation for this puzzling transformation in warfare The Culture of Military Innovation offers a systematic thorough and unique analytical approach that may well be applicable in other perplexing strategic situations Though framed in the context of specific historical experience the insights of this book reveal important implications related to conventional subconventional and nonconventional security issues It is therefore an ideal reference work for practitioners scholars teachers and students of security studies

The Diffusion of Military Power Michael Horowitz, 2010 The Diffusion of Military Power examines how the financial and organizational challenges of adopting new methods of fighting wars can influence the international balance of power Michael Horowitz argues that a state or actor wishing to adopt a military innovation must possess both the financial resources to buy or build the technology and the internal organizational capacity to accommodate any necessary changes in recruiting training or operations How countries react to new innovations and to other actors that do or don't adopt them has profound implications for the global order and the likelihood of war Horowitz looks at some of the most important military innovations throughout history including the advent of the all big gun steel battleship the development of aircraft carriers and nuclear weapons and the use of suicide terror by nonstate actors He shows how expensive innovations can favor wealthier more powerful countries but also how those same states often stumble when facing organizationally complicated innovations Innovations requiring major upheavals in doctrine and organization can disadvantage the wealthiest states due to their bureaucratic inflexibility and weight the balance of power toward smaller and more nimble actors making conflict more likely This book provides vital insights into

military innovations and their impact on U S foreign policy warfare and the distribution of power in the international system

The Military Revolution Geoffrey Parker, 1996-04-18 This is a new edition of Geoffrey Parker's much admired illustrated account of how the West so small and so deficient in natural resources in 1500 had by 1800 come to control over one third of the world Parker argues that the rapid development of military practice in the West constituted a military revolution which gave Westerners an insurmountable advantage over the peoples of other continents This edition incorporates new material including a substantial Afterword which summarises the debate which developed after the book's first publication **US**

Military Innovation since the Cold War Harvey Sapolsky, Benjamin Friedman, Brendan Green, 2009-04-28 This book explains how the US military reacted to the Revolution in Military Affairs RMA and failed to innovate its organization or doctrine to match the technological breakthroughs it brought about Many called for the transformation of the US military in the years after the end of the Cold War seeking the changes in organization and doctrine that would complete the RMA innovation and a commitment to counter insurgency peace keeping and nation building missions This volume describes the origins uses and limits of the RMA technologies examines how each of the five US armed services categorising the Special Operations as a separate service made their adjustments both to the technologies and the use of force and how the role of the civilian officials and the defense industry altered in this process of change and avoidance of change The book examines the internal politics of the services as well as civil military relations to identify the external pressures on the services for significant change in their doctrine and weapons Many have noted the failure of the services to innovate in what can be called the Second Inter war Period the years after the Cold War This book offers explanations for this failure and arguments about the possible range and desirability of military innovation in the post Cold war era This book will be of great interest to students of strategic studies US defence politics military studies and US politics Harvey M Sapolsky is Professor of Public Policy and Organization in the Department of Political Science at MIT and former Director of the Security Studies Program Benjamin H Friedman is a Research Fellow in Defense and Homeland Security Studies at the Cato Institute and a Ph D Candidate in Political Science at MIT Brendan Green is a Ph D Candidate in Political Science at MIT and an affiliate of the Security Studies Program *Modern Military Technology in Counterinsurgency Warfare* Victor Shiu Chiang Cheng, 2007

Military Innovation in Small States Michael Raska, 2015-11-06 This book provides a comprehensive assessment of the global diffusion of the Revolution in Military Affairs RMA and its impact on military innovation trajectories in small states Although the Revolution in Military Affairs RMA concept has enjoyed significant academic attention the varying paths and patterns of military innovation in divergent strategic settings have been overlooked This book seeks to rectify this gap by addressing the broad puzzle of how the global diffusion of RMA oriented military innovation the process of international transmission communication and interaction of RMA related military concepts organizations and technologies has shaped the paths patterns and scope of military innovation of selected small states In a reverse mode how have selected small states

influenced the conceptualization and transmission of the RMA theory processes and debate Using Israel Singapore and South Korea as case studies this book argues that RMA oriented military innovation paths in small states indicate predominantly evolutionary trajectory albeit with a varying patterns resulting from the confluence of three sets of variables 1 the level of strategic organizational and operational adaptability in responding to shifts in the geostrategic and regional security environment 2 the ability to identify anticipate exploit and sustain niche military innovation select conceptual organizational and technological innovation intended to enhance the military s ability to prepare for fight and win wars and 3 strategic culture While the book represents relevant empirical cases for testing the validity of the RMA diffusion hypotheses from a policy oriented perspective this book argues that these case studies offer lessons learned in coping with the security and defence management challenges posed by military innovation in general This book will be of much interest for students of military innovation strategic studies defence studies Asian politics Middle Eastern politics and security studies in general
