The diagram illustrates the electron transport chain. Electrons from NADH enter the chain at Complex I (NADH dehydrogenase), then move to Complex II (Succinate dehydrogenase), then to the Cytochrome bc1 complex, and finally to Complex IV (Cytochrome c oxidase). As electrons flow, protons (H⁺) are pumped from the matrix to the intermembrane space. The final electron acceptor is oxygen, which is reduced to water. The resulting proton gradient drives ATP synthesis via ATP synthase.

Post-transcriptional regulation is the control of gene expression at the RNA level, therefore between the transcription and the translation of the gene. It contributes substantially to gene expression regulation across human tissues.

Control of Gene Expression Norman Maclean, 1976 The control of gene expression and its levels of action Gene expression in prokaryotes Experimental systems of differential gene function in eukaryotes systems involving one type of protein Experimental systems of differential gene function in eukaryotes systems of limited complexity Experimental systems of differential gene function in eukaryotes systems not well understood in molecular terms RNA involvement in gene expression General concepts of gene regulation Bibliography of Agriculture, 1988-12 Regulation of Gene Expression Gary H. Perdew, Jack P. Vanden Heuvel, Jeffrey M. Peters, 2008-08-17 The use of molecular biology and biochemistry to study the regulation of gene expression has become a major feature of research in the biological sciences Many excellent books and reviews exist that examine the experimental methodology employed in specific areas of molecular biology and regulation of gene expression However we have noticed a lack of books especially textbooks that provide an overview of the rationale and general experimental approaches used to examine chemically or disease mediated alterations in gene expression in mammalian systems For example it has been difficult to find appropriate texts that examine specific experimental goals such as proving that an increased level of mRNA for a given gene is attributable to an increase in transcription rates Regulation of Gene Expression Molecular Mechanisms is intended to serve as either a textbook for graduate students or as a basic reference for laboratory personnel Indeed we are using this book to teach a graduate level class at The Pennsylvania State University For more details about this class please visit <http://moltox.cas.psu.edu> and select Courses The goal for our work is to provide an overview of the various methods and approaches to characterize possible mechanisms of gene regulation Further we have attempted to provide a framework for students to develop an understanding of how to determine the various mechanisms that lead to altered activity of a specific protein within a cell Eukaryotic Gene Regulation, 1980

Translational Regulation of Gene Expression J. Ilan, 2013-11-11 *Gene Regulation* Bert W. O'Malley, 1982 *Translational Control of Gene Expression* Nahum Sonenberg, John W. B. Hershey, Michael B. Mathews, 2001 Since the 1996 publication of *Translational Control* there has been fresh interest in protein synthesis and recognition of the key role of translation control mechanisms in regulating gene expression This new monograph updates and expands the scope of the earlier book but it also takes a fresh look at the field In a new format the first eight chapters provide broad overviews while each of the additional twenty eight has a focus on a research topic of more specific interest The result is a thoroughly up to date account of initiation elongation and termination of translation control mechanisms in development in response to extracellular stimuli and the effects on the translation machinery of virus infection and disease This book is essential reading for students entering the field and an invaluable resource for investigators of gene expression and its control

Control of Plant Gene Expression Desh Pal S. Verma, 1993 *Control of Plant Gene Expression* is a comprehensive volume describing the regulation and control of specific plant genes expressed in different tissues during plant development It addresses several fundamental aspects of plant gene regulation including signal transduction mechanisms and the role of plant hormones It also discusses the structure and regulation of important metabolic genes such as those involved in nitrogen and carbon assimilation lipid biosynthesis and secondary metabolism The book provides excellent examples of genetic engineering applications to alter agronomically important traits making it an essential reference volume for plant molecular biologists and plant biotechnologists It also contains a wealth of information that will be valuable to students specializing in plant molecular biology plant development gene regulation in plants molecular plant physiology or plant biotechnology

Control of Gene Expression by Cell Size Chia-Yung Wu, 2010 Polyploidy increased copy

number of whole chromosome sets in the genome is a common cellular state in evolution development and disease Polyploidy enlarges cell size and alters gene expression producing novel phenotypes and functions Although many polyploid cell types have been discovered it is not clear how polyploidy changes physiology Specifically whether the enlarged cell size of polyploids causes differential gene regulation has not been investigated In this thesis I present the evidence for a size sensing mechanism that alters gene expression in yeast My results indicate a causal relationship between cell size and gene expression Ploidy associated changes in the transcriptome therefore reflect transcriptional adjustment to a larger cell size The causal and regulatory connection between cell size and transcription suggests that the physical features of a cell such as size and shape are a systematic factor in gene regulation In addition cell size homeostasis may have a critical function maintenance of transcriptional homeostasis *Biological Regulation and Development* Robert F. Goldberger, 1979

Translational Control of Gene Expression ,1966 *Maximizing Gene Expression* William S. Reznikoff, 1986

Post-transcriptional Control of Gene Expression Celine Sin, 2016 Gene expression describes the process of making functional gene products e g proteins or special RNAs from instructions encoded in the genetic information e g DNA This process is heavily regulated allowing cells to produce the appropriate gene products necessary for cell survival adapting production as necessary for different cell environments Gene expression is subject to regulation at several levels including transcription mRNA degradation translation and protein degradation When intact this system maintains cell homeostasis keeping the cell alive and adaptable to different environments Malfunction in the system can result in disease states and cell death In this dissertation we explore several aspects of gene expression control by analyzing data from biological experiments Most of the work following uses a common mathematical model framework based on Markov chain models to test hypotheses predict system dynamics or elucidate network topology Our work lies in the intersection between mathematics and biology **Gene Expression and Regulation** ,2006 This book offers a comprehensive look into the science of gene expression and regulation Focusing on topics such as actions of nuclear receptors RNA processing and DNA methylation and imprinting Gene Expression and Regulation is edited by a leading biologist and includes contributions by experts in the field
