Composite Fan Blade Design for Advanced Engine Concepts National Aeronautics and Space Administration (NASA),2018-06-21 The aerodynamic and structural viability of composite fan blades of the revolutionary Exo Skeletal engine are assessed for an advanced subsonic mission using the NASA EST BEST computational simulation system The Exo Skeletal Engine ESE calls for the elimination of the shafts and disks completely from the engine center and the attachment of the rotor blades in spanwise compression to a rotating casing The fan rotor overall adiabatic efficiency obtained from aerodynamic analysis is estimated at 91.6 percent The flow is supersonic near the blade leading edge but quickly transitions into a subsonic flow without any turbulent boundary layer separation on the blade The structural evaluation of the composite fan blade indicates

that the blade would buckle at a rotor speed that is 3.5 times the design speed of 2000 rpm. The progressive damage analysis of the composite fan blade shows that ply damage is initiated at a speed of 4870 rpm while blade fracture takes place at 7640 rpm. This paper describes and discusses the results for the composite blade that are obtained from aerodynamic displacement stress buckling modal and progressive damage analyses. It will be demonstrated that a computational simulation capability is readily available to evaluate new and revolutionary technology such as the ESE Abumeri Galib H and Kuguoglu Latife H and Chamis Christos C. Design and Manufacture of Wood Blades for Windtunnel Fans National Aeronautics and Space Administration (NASA), 2018-07-24. Many windtunnels use wooden fan blades; however, because of their usual long life (often in excess of 50 years), wooden blades typically do not have to be replaced very often. Therefore, the expertise for designing and building wooden windtunnel fan blades is being lost. The purpose of this report is to document the design and build process so that when replacement blades are eventually required, some of the critical information required is available. Information useful to fan blade designers, fabricators, inspectors, and windtunnel operations personnel is included. Fixed pitch and variable pitch fans, as well as fans which range in size from a few feet in diameter to over 40 ft in diameter, are described. Woods, adhesives, and coverings are discussed. Axial Flow Fans R. A. Wallis, 2014-05-12. Axial Flow Fans Design and Practice focuses on the design of axial flow fans and the practices involved in their applications. The manuscript first offers information on the fluid mechanics of ducted fans, boundary layer and skin friction relations, and aerofoil data for blade design. Discussions focus on flow deflection in cascade of aerofoils, pitching moment, lift surface roughness in turbulent boundary layers, turbulent boundary layers in pressure gradients, laminar skin friction, viscosity, and boundary layers and similarity, and non-dimensional numbers. The text then ponders on vortex flows in ducting and fan ducts and introduction to fan design methods. The book takes a look at the momentum and blade element considerations on free vortex flow of rotor and rotor losses. Topics include momentum considerations, profile drag, tip clearance losses, optimum conditions in terms of the flow and swirl coefficients, pressure relations, and velocity vectors and thrust and torque gradients. Tail fairing design and associated losses, overall efficiencies, torque, thrust, and power, and the design of fan unit with arbitrary vortex flow are also discussed. The publication is a dependable source of information for engineers and readers interested in the design of axial flow fans and practices involved in their operation.

Design and Fabrication of Ceiling Fan Blades Cleaner Norfarahanim Muhamad @ Ramli, 2007. ABSTRACT: This project presents finite element based durability assessment for a new ceiling fan blade cleaner. The objectives of this project are to create a portable, versatile, and ergonomic ceiling fan blade cleaner and to create equipment that is easy to operate. Sponge and plastic material were studied in this thesis, which are commonly used in industry. The structural three-dimensional solid modelling of ceiling fan cleaner was developed using the

solid work software The acquired result present both of ceiling fan blades surface is cleaned when used sponge The dust and cobwebs from blade is free to fall into the dust box The durability assessment results are significant to improve the component design at the early developing stage The results can also significantly reduce the cost and time to market and improve product reliability and customer confidence Author
