

Critical Care Calculations Study Guide

Example 1a:

Order: 100 mg po qid for hypertension ordered as 1 mg/kg/24hr. The pt has 150 kg weight.
Dependent on patient's weight for patient assessment

1. Always determine the dose of medication per day. (Strong recommendation)

100 mg x 4 = 400 mg
(200 mg)

2. Did you round the dependent parameter back up to what it was or what it was? (Strong recommendation)

100 mg is not rounded

3. What is independent calculation parameter previously stated? (Strong recommendation)

- a. Independent calculation
- b. 100 mg (dose of drug)
- c. Number of doses in 24-hour period
- d. Dose per patient is 100

Dependent amount of drug is 100 mg/24hr (100 mg)
(100 mg)

(Strong recommendation)

100 mg x 4 = 400 mg (100 mg x 4 = 400 mg) (100 mg x 4 = 400 mg) (100 mg x 4 = 400 mg)

4. If the drug is recommended, simply include the weight from the equation

Example 1b:

Order: 100 mg po qid for hypertension ordered as 1 mg/kg/24hr. The patient has 150 kg weight.
Dependent on patient's weight for patient assessment

Dependent on patient's weight

Dependent amount of drug is 100 mg/24hr (100 mg)
(100 mg)

- a. Independent calculation of drug is 100 mg/24hr (100 mg)
- b. Did you round the dependent parameter back up to what it was or what it was? (Strong recommendation)
- c. 100 mg (dose of drug)

100 mg x 4 = 400 mg (100 mg x 4 = 400 mg) (100 mg x 4 = 400 mg) (100 mg x 4 = 400 mg)

Critical Care Calculations Study Guide

HALL

Critical Care Calculations Study Guide:

Critical Care Study Guide Gerard J. Criner, Gilbert E. D'Alonzo, 2013-03-09 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states requiring extensive knowledge and clinical acumen are commonly found. Caring for critically ill patients requires an extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and therapeutic interventions. Because this knowledge base crosses many different disciplines, introduction to caring for the intensive care patient while exciting may also be intimidating. This textbook is designed toward making the dynamic environment of the critical care unit understandable and the approach to the patient both logical and successful. The book contains three components: 1. description of the procedural tasks commonly performed for the critically ill patient; 2. explanation of the most common pathophysiologic states encountered; and 3. description of specific disease entities with details of their differential diagnosis, diagnostic strategy, and therapeutic plan. This book also uses several educational approaches that we have found useful in our own teaching sessions and prior textbooks. Clinical cases introduce chapters and highlight chapter segments to emphasize clinical relevancy. As an additional study aid, margin notes highlight important teaching points and facilitate easy review of chapter content. To consolidate the principles outlined in each chapter, review questions with full text explanations are provided at the end of each chapter. All these elements help reinforce the most important messages for the reader. *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1992

Clinical Calculations Joyce LeFever Kee, Sally M. Marshall, 2000 This popular resource is still the only text to review all four major drug calculation methods: basic formula, ratio and proportion, fractional equation, and dimensional analysis. Practice problems help readers master each method so they can apply them effectively in practice. Completely updated throughout this fourth edition, it provides the latest information on dosage calculations as well as the most current drug dosages.

Study Guide for Pharmacology Joyce LeFever Kee, Evelyn R. Hayes, Linda E. McCuiston, 2008-10 This book accompanies the text *Pharmacology: A Nursing Process Approach*, sixth edition, and may also be used independently of the text. Preface

Study Guide to Accompany Pharmacology for Nursing Care Marshal Shlafer, Richard A. Lehne, 2004 This study guide features high-caliber learning activities that apply the renowned Dr. Marshal Shlafer's rich experience in teaching pharmacology to a wide range of student learning styles.

Calculation of Drug Dosages Sheila J. Ogden, 2003 This popular dosage calculation work text helps students master the critical skills necessary to competently and confidently calculate drug dosages. Innovative and practical, it includes information on the ratio and proportion formula and dimensional analysis methods of drug calculation and numerous practice problems to accompany these methods. Ideal for students who need an extensive math review in addition to drug calculations content, this new edition features a more logical organization, a new chapter addressing medication administration to critically ill patients, and more practice problems on calculations for pediatric patients.
