Cardona,2012-02-15 Mycobacterium tuberculosis is a disease that is transmitted through aerosol This is the reason why it is
estimated that a third of humankind is already infected by Mycobacterium tuberculosis The vast majority of the infected do
not know about their status Mycobacterium tuberculosis is a silent pathogen causing no symptomatology at all during the
infection In addition infected people cannot cause further infections Unfortunately an estimated 10 per cent of the infected
population has the probability to develop the disease making it very difficult to eradicate Once in this stage the bacilli can be
transmitted to other persons and the development of clinical symptoms is very progressive Therefore the diagnosis especially
the discrimination between infection and disease is a real challenge In this book we present the experience of worldwide
specialists on the diagnosis along with its lights and shadows **Tuberculosis E-Book** H. Simon Schaaf,Alimuddin
