Instruction and Student Performance in Balancing Chemical Equations William Levi Yarroch,1983 **An English Translation of the Chemical Constitution of the Atmosphere from Earth's Origin to the Present, and Its Implications for Protection of Industry and Ensuring Environmental Quality by C.J. Koene (1856)** Corneille Jean

Koene,2004 C J Koene s 1856 book on the history of the atmosphere had nearly become a lost work when the author with the help of a European colleague located a rare surviving copy This book presented here in its original French with English translation is a foundational document in the earth and environmental sciences and deserves to be more widely known Koene was one of the first to suggest correctly that atmospheric carbon dioxide levels had decreased over geologic time and was also among the first scientists to grapple with the environmental implications of the industrial revolution In this translated edition the author in the Foreword and David Schwartzman in the Preface discuss the significance of Koene s work and its importance for understanding both the history of early research into the development of Earth s atmosphere and the history of environmental debates associated with industrialization Presented as a series of four public lectures this book provides an engaging glimpse of the development of the science of atmospheric chemistry and a unique view of the early progress of what would now be called earth science The book is extensively annotated with footnotes relating Koene s writings to both earlier and later work Koene can now be recognized along with other luminaries such as J J Ebelman and V I Vernadsky as one of the founders of earth system science a research field that is of great contemporary interest to geologists geochemists paleoclimatologists environmental consultants and atmospheric chemists **Chemical Principles** William L.
