Wang,Yongqiang Ye,Bin Zhang,2014-06-19 This book is on the iterative learning control ILC with focus on the design and implementation We approach the ILC design based on the frequency domain analysis and address the ILC implementation based on the sampled data methods This is the first book of ILC from frequency domain and sampled data methodologies The frequency domain design methods offer ILC users insights to the convergence performance which is of practical benefits This book presents a comprehensive framework with various methodologies to ensure the learnable bandwidth in the ILC system to be set with a balance between learning performance and learning stability The sampled data implementation ensures effective execution of ILC in practical dynamic systems The presented sampled data ILC methods also ensure the balance of performance and stability of learning process Furthermore the presented theories and methodologies are tested with an ILC controlled robotic system The experimental results show that the machines can work in much higher accuracy than a feedback control alone can offer With the proposed ILC algorithms it is possible that machines can work to their hardware design limits set by sensors and actuators The target audience for this book includes scientists engineers and practitioners involved in any systems with repetitive operations
