### **Control Systems Engineering By P Ramesh Babu Third Edition:**

Smart Agriculture Govind Singh Patel, Amrita Rai, Nripendra Narayan Das, R.P. Singh, 2021-02-10 This book endeavours to highlight the untapped potential of Smart Agriculture for the innovation and expansion of the agriculture sector. The sector shall make incremental progress as it learns from associations between data over time through Artificial Intelligence, deep learning and Internet of Things applications. The farming industry and Smart agriculture develop from the stringent limits imposed by a farm's location which in turn has a series of related effects with respect to supply chain management, food availability, biodiversity, farmers' decision making and insurance and environmental concerns among others. All of the above mentioned aspects will derive substantial benefits from the implementation of a data driven approach under the condition that the systems, tools and techniques to be used have been designed to handle the volume and variety of the data to be gathered. Contributions to this book have been solicited with the goal of uncovering the possibilities of engaging agriculture with equipped and effective profound learning algorithms. Most agricultural research centres are already adopting Internet of Things for the monitoring of a wide range of farm services and there are significant opportunities for agriculture administration through the effective implementation of Machine Learning, Deep Learning, Big Data and IoT structures.

*INDUSTRIAL WASTEWATER TREATMENT, SECOND EDITION* PATWARDHAN, A.D., 2017-06-01 Industries use a large number of substances in their manufacturing processes and also generate solid residues, liquid effluents and gaseous emissions as wastes. These may be organic, inorganic, inert or toxic compounds but are hazardous in nature and thus need to be treated and disposed off suitably in order to maintain ecological balance of the environment. Also, wherever feasible, recovery of useful by-products, recycling of water and reuse of wastewater with or without treatment save resources and reduce production cost. In view of the above, the book has been written and now updated in the second edition to discuss sources, characteristics and treatment of wastewater produced in industries such as textiles, dairy, tanneries, pulp and paper, fertilizer, pesticide, organic and inorganic chemicals, engineering and fermentation. Many flow diagrams have been included to illustrate industrial processes and to indicate the sources of wastewater. After describing treatment for individual factories, the author discusses the more advanced and economical common effluent plants. The text uses simple and straightforward language and makes the presentation attractive. This book should prove extremely useful to undergraduate students of civil and chemical engineering and postgraduate students of environmental science and engineering. Industrial design consultants will also find the book very handy. To the Greens, it may offer some of the solutions to their concerns. NEW TO THE SECOND EDITION Includes the concept of Zero Liquid Discharge (ZLD) in Chapter 1 and provides further information in Appendix A. Incorporates brief information about plasma gasification technique in Appendix B and advanced oxidation technique in Chapter 3. Includes ecological aspects of pollution control and a reference on benthal load in Chapter 4. Provides information on jute retting in Chapter 6. Incorporates topics such as photocatalytic degradation of phenols from coke oven wastes, HCl
