Social Media, Artificial Intelligence and Carbon Neutrality, 2nd edition Rita Yi Man Li ,James Crabbe,Xuefeng Shao ,2025-10-09 Carbon neutrality refers to net zero carbon emissions It can be achieved by reducing carbon emissions or increasing carbon adsorption The popularity of social media including Twitter YouTube and LinkedIn provides good channels for sharing relevant information and promoting sustainable carbon neutral living styles For example a motor company has launched social media challenges with Korean pop stars to raise awareness on carbon neutrality Social media provides real time information In Jakarta flood related tweet intensity during a flood peaked at about 900 tweets a minute during the floods of 2015 The tweets created real time maps that people sent a minute before Regarding government policies identification of problem areas is needed to help policy makers to resolve problems Machine learning can monitor these events by studying past records to know about how countries and governments performed in a high risk event or environmental crisis and this data can be used to provide future recommendations to governments for policy making Additionally AI can analyze online unstructured data predict various scenarios of carbon emissions and adsorptions using structured data The world of social media is a huge data source still yet to be fully optimized in science While social media is often used in industry scientific research on these findings is scarce This Research Topic aims to address carbon neutrality from social media big data and artificial intelligence perspectives We welcome articles on themes including but not limited to Carbon neutrality modeling via Artificial Intelligence Carbon neutrality social media big data analysis Natural language processing for carbon neutrality text in social media e g YouTube Twitter Facebook Text mining for carbon neutral social media information related to different stages in the built environment Prediction of carbon dioxide emissions via machine learning deep learning etc AI sentiment analysis on carbon neutrality expressions in social media Computer vision for analyzing figures related to carbon emissions Prediction of coral changes due to increases in carbon emissions Shore and Beach ,1934 *Games, Gambling, and Probability* David G. Taylor,2021-06-22 Many experiments have shown the human brain generally has very serious problems dealing with probability and chance A greater understanding of probability can help develop the intuition necessary to approach risk with the ability to make more informed and better decisions The first four chapters offer the standard content for an introductory probability course albeit presented in a much different way and order The chapters afterward include some discussion of different games different ideas that relate to the law of large numbers and many more mathematical topics not typically seen in such a book The use of games is meant to make the book and course feel like fun Since many of the early games discussed are casino games the study of those games along with an understanding of the material in later chapters should remind you that gambling is a bad idea you should think of placing bets in a casino as paying for entertainment Winning can obviously be a fun reward but should not ever be expected Changes for the Second Edition New chapter on Game Theory New chapter on Sports Mathematics The chapter on Blackjack which was Chapter 4 in the first

edition appears later in the book Reorganization has been done to improve the flow of topics and learning New sections on Arkham Horror Uno and Scrabble have been added Even more exercises were added The goal for this textbook is to complement the inquiry based learning movement In my mind concepts and ideas will stick with the reader more when they are motivated in an interesting way Here we use questions about various games not just casino games to motivate the mathematics and I would say that the writing emphasizes a just in time mathematics approach Topics are presented mathematically as questions about the games themselves are posed Table of Contents Preface 1 Mathematics and Probability 2 Roulette and Craps Expected Value 3 Counting Poker Hands 4 More Dice Counting and Combinations and Statistics 5 Game Theory Poker Bluffing and Other Games 6 Probability Stochastic Matrices Board Game Movement 7 Sports Mathematics Probability Meets Athletics 8 Blackjack Previous Methods Revisited 9 A Mix of Other Games 10 Betting Systems Can You Beat the System 11 Potpourri Assorted Adventures in Probability Appendices Tables Answers and Selected Solutions Bibliography Biography Dr David G Taylor is a professor of mathematics and an associate dean for academic affairs at Roanoke College in southwest Virginia He attended Lebanon Valley College for his B S in computer science and mathematics and went to the University of Virginia for his Ph D While his graduate school focus was on studying infinite dimensional Lie algebras he started studying the mathematics of various games in order to have a more undergraduate friendly research agenda Work done with two Roanoke College students Heather Cook and Jonathan Marino appears in this book Currently he owns over 100 different board games and enjoys using probability in his decision making while playing most of those games In his spare time he enjoys reading cooking coding playing his board games and spending time with his six year old dog Lilly
