Creating Regenerative Cities:

Creating Regenerative Cities Herbert Girardet, 2014-09-19 Large modern cities have effectively declared their independence from nature But while they take up only three percent of the world's land surface their ecological footprints actually cover the entire globe Humanity is building an urban future yet urban resource use is threatening the future of humanity and the natural world To meet the aspirations of city people in both developing and developed countries bold new initiatives are needed Modern cities are an astonishing human achievement As centres of innovation they are humanity's cultural playgrounds Their communication and transport systems have developed a global reach They are attractive to investors because they can offer a vast variety of services at comparatively low per capita costs But are they viable as ecological systems The planning of new cities as well as the retrofit of existing cities needs to undergo a profound paradigm shift Mere sustainable development is not enough To be compatible with natural systems cities need to move away from linear systems of resource use and learn to operate as closed loop circular systems To ensure their long term future they need to develop an environmentally enhancing restorative relationship between themselves and the natural systems on which they still depend Creating Regenerative Cities is a concise solution oriented manual for creating regenerative urbanisation A wide range of technical management and policy solutions already exist but implementation has been too slow and too little in large part because the kinds of holistic approaches needed are still unfamiliar to fragmented and process driven urban policy making and governance Herbert Girardet's 30 years experience as an ecologist thinker film maker and consultant working around the world has created this unique combination of tried and tested best practices and policies which outlines the fundamental shifts needed in the way we think about our cities

Extreme Cities Ashley Dawson, 2017-10-31 How will climate change affect our lives Where will its impacts be most deeply felt Are we doing enough to protect ourselves from the coming

chaos In *Extreme Cities* Ashley Dawson argues that cities are ground zero for climate change contributing the lion's share of carbon to the atmosphere while also lying on the frontlines of rising sea levels Today the majority of the world's megacities are located in coastal zones yet few of them are adequately prepared for the floods that will increasingly menace their shores Instead most continue to develop luxury waterfront condos for the elite and industrial facilities for corporations These not only intensify carbon emissions but also place coastal residents at greater risk when water levels rise In *Extreme Cities* Dawson offers an alarming portrait of the future of our cities describing the efforts of Staten Island New York and Shishmareff Alaska residents to relocate Holland's models for defending against the seas and the development of New York City before and after Hurricane Sandy Our best hope lies not with fortified sea walls he argues Rather it lies with urban movements already fighting to remake our cities in a more just and equitable way As much a harrowing study as a call to arms *Extreme Cities* is a necessary read for anyone concerned with the threat of global warming and of the cities of the world

'One Planet' Cities David Thorpe, 2019-04-30 This book addresses the crucial question of how the essential needs of the growing human population can be met without breaking the Earth's already stretched life support system With four out of five people predicted to be urban dwellers by 2080 *One Planet Cities* proposes a pathway to genuine sustainability for cities and neighbourhoods using an approach based on contraction and convergence Utilising interviews with key players including the Global Footprint Network World Future Council WWF mayors and government officials and case studies from across the globe including Europe North and South America Australia South Africa China and India David Thorpe examines all aspects of modern society from food provision to neighbourhood design via industry the circular economy energy and transport through the critical lens of the ecological footprint and relevant supporting international standards and indicators Recommendations on managing supply chains and impacts how the transition to a world within limits might be financed and a deep examination of the Welsh Government's pioneering efforts follow It concludes with an imagined vision of what a genuinely sustainable future might be like and an appeal for one planeters everywhere to step up to the challenge This book will be of great interest to practitioners and policymakers involved in governance administration urban environments and sustainability alongside students of the built environment urban planning environmental policy and energy

Postgrowth Imaginaries Luis I. Prádanos, 2018-11-23 *Postgrowth Imaginaries* brings together environmental cultural studies and postgrowth economics to examine radical cultural shifts sparked by the global financial crisis The globalization of an economic culture addicted to constant growth destroys the ecological planetary systems while failing to fulfil its social promises A transition toward what Prádanos calls postgrowth imaginaries the counterhegemonic cultural sensibilities that are challenging the growth paradigm is well underway in the Iberian Peninsula today

Low Carbon Cities Steffen Lehmann, 2014-09-15 *Low Carbon Cities* is a book for practitioners students and scholars in architecture urban planning and design It features essays on ecologically sustainable cities by leading exponents of urban sustainability case studies of the
