Department of Law,2000 Digital audio sampling exemplifies many of the problems that digitised works pose for copyright law Two contrasting applications of digital sampling are examined First the production for compositional use of single sound samples The investment required to produce such samples may make protection for such samples desirable Examination of the protection of these samples raises issues which question underlying assumptions that shape copyright law and indicate that there might be a move from copyright s touchstone of originality towards an investment based paradigm as provided for in the European Community s Database Directive The second application of digital sampling involves appropriation of pre existing material a practice that the courts generally treat as copyright infringing A typology of sampling is developed to indicate the myriad forms of sampling and suggestions made to facilitate judicial determination of infringement Alternatives to liability fair use dealing and licensing are

discussed Proposals are made which may be relevant to the licensing of digital content generally in particular multimedia works whose production like digital sampling may be thwarted because transaction costs are too high The main theme of the thesis suggests that regardless of the digital revolution music has never been adequately accommodated in the print scheme model for copyright The approach adopted in this thesis acknowledges that copyright has both a commercial and cultural dimension and contextual discussion of digital sampling highlights that digital technology has merely facilitated formerly avant garde musical composition techniques and that creativity is not solely dependent on technology The thesis focuses on the United Kingdom and the United States who despite their eighteenth century shared heritage have divergent approaches to copyright law
