Advanced Topics in Computational Partial Differential Equations Hans Petter Langtangen, Aslak Tveito, 2012-09-22 This book is about solving partial differential equations PDEs Such equations are used to model a wide range of phenomena in virtually all fields of science and technology In the last decade the general availability of extremely powerful computers has shifted the focus in computational mathematics from simplified model problems to much more sophisticated models resembling in intricate features of real life This change challenges our knowledge in computer science and in numerical analysis The main objective of the present book is to teach modern advanced techniques for numerical PDE solution The book also introduces several models arising in fields like finance medicine material technology and geology In order to read this book you must have a basic knowledge of partial differential equations and numerical methods for solving such equations Furthermore some background in finite element methods is required You do not need to know Diffpack although this programming environment is used in examples throughout the text Basically this book is about models methods and how to implement the methods For the implementation part it is natural for us to use Diffpack as the programming environment because making a PDE solver in Diffpack requires little amount of programming and because Diffpack has support for the advanced numerical methods treated in this book Most chapters have a part on models and methods and a part on implementation and Diffpack programming The exposition is designed such that readers can focus only on the first part if desired
