Digital Sine Wave Generator Circuit:

110 Waveform Generator Projects for the Home Constructor R. M. Marston, 2016-03-16 110 Waveform Generator Projects for the Home Constructor deals with waveform generator circuits that can produce forms of sine square triangle sawtooth ramp pulse or staircase The generator circuits built by the constructor using transistors operational amplifiers or digital integrated circuits can produce modulated or unmodulated outputs with single or multiple form outputs The constructor must follow two requirements in building a simple sine wave oscillator firstly the output of an amplifying device must be fed back to its input via a frequency selective network in such a way that the sum of the amplifier and feedback network phase shifts equals zero or 360 degrees at the desired oscillation frequency Secondly the gain of the amplifying device must exactly counter the loss or attenuation of the frequency selective feedback network at the desired oscillation frequency to give an overall system gain of precise unity The book also describes different waveform modulations such as amplitude modulation a m frequency modulation f m frequency shift keying f s k phase shift keying p s k sweep modulation carrier keying and how to apply these in practical circuits Radio technicians engineers apprentices hobbyists and students of electrical engineering or electronics will find the book very useful

Circuits for Electronic Instrumentation Thomas Henry O'Dell, 1991-08-30 This book is an up to date text on electronic circuit design The subject is dealt with from an experimental point of view but this has not restricted the author to well known or simple circuits Indeed some very recent and quite advanced circuit ideas are put forward for experimental work Each chapter takes up a particular type of circuit and then leads the reader on to gain an understanding of how these circuits work by proposing experimental circuits for the reader to build and make measurements on This is the first book to take such a practical approach to this level The book will be useful to final year undergraduates and postgraduates in electronics practising engineers and workers in all fields where electronic instrumentation is used and there is a need to understand electronics and the interface between the instrument and the user s own experimental system The book s references will also be a very helpful guide to the literature

Timer/Generator Circuits Manual R. M. Marston, 2013-10-22 Timer Generator Circuits Manual is an 11 chapter text that deals mainly with waveform generator techniques and circuits Each chapter starts with an explanation of the basic principles of its subject followed by a wide range of practical circuit designs This work presents a total of over 300 practical circuits diagrams and tables Chapter 1 outlines the basic principles and the different types of generator Chapters 2 to 9 deal with a specific type of waveform generator including sine square triangular sawtooth and special waveform generators pulse These chapters also include pulse generator time IC generator and waveform synthesizer circuits Chapter 10 examines the characteristics of phase locked loop circuits while Chapter 11 looks into the miscellaneous applications of the ubiquitous 555 timer type of integrated circuit The appendix presents a number of useful waveform generator design charts as an aid to those readers who wish to design or modify generator circuits to their own specifications This book will prove useful to
