Garrison,2003 Whole System Design Peter Stasinopoulos,Michael H. Smith,Karlson Hargroves,Cheryl Desha,2013-01-11 Whole System Design is increasingly being seen as one of the most cost effective ways to both increase the productivity and reduce the negative environmental impacts of an engineered system A focus on design is critical as the output from this stage of the project locks in most of the economic and environmental performance of the designed system throughout its life which can span from a few years to many decades Indeed it is now widely acknowledged that all designers particularly engineers architects and industrial designers need to be able to understand and implement a whole system design approach This book provides a clear design methodology based on leading efforts in the field and is supported by worked examples that demonstrate how advances in energy materials and water productivity can be achieved through applying an integrated approach to sustainable engineering Chapters 1 5 outline the approach and explain how it can be implemented to enhance the established Systems Engineering framework Chapters 6 10 demonstrate through detailed worked examples the application of the approach to industrial pumping systems passenger vehicles electronics and computer systems temperature control of buildings and domestic water systems Published with The Natural Edge Project the World Federation of Engineering Organizations UNESCO and the Australian Government Tactile Display for Virtual 3D Shape Rendering Alessandro Mansutti,Mario Covarrubias Rodriguez,Monica Bordegoni,Umberto Cugini,2017-02-15 This book describes a novel system for the simultaneous visual and tactile rendering of product shapes which allows designers to simultaneously touch and see new product shapes during the conceptual phase of product development This system offers important advantages including potential cost and time savings compared with the standard product design process in which digital 3D models and physical prototypes are often repeatedly modified until an optimal design is achieved The system consists of a tactile display that is able to represent within a real environment the shape of a product Designers can explore the rendered surface by touching curves lying on the product shape selecting those curves that can be considered style features and evaluating their aesthetic quality In order to physically represent these selected curves a flexible surface is modeled by means of servo actuated modules controlling a physical deforming strip The tactile display is designed so as to be portable low cost modular and high performing in terms of the types of shape that it can represent **Fundamentals of Digital Systems Design** V.
