The papers contained in this volume were presented at the fourth edition of the IFIP International Conference on Theoretical Computer Science IFIP TCS held August 23-24, 2006 in Santiago, Chile. They were selected from 44 papers submitted from 17 countries in response to the call for papers. A total of 16 submissions were accepted as full papers, yielding an acceptance rate of about 36%. Papers solicited for IFIP TCS 2006 were meant to constitute original contributions in two general areas: Algorithms, Complexity, and Models of Computation; and Logic, Semantics, Specification, and Verification. The conference also included six invited presentations: Marcelo Arenas, Pontificia Universidad Católica de Chile, Chile; Jozef Gruska, Masaryk University, Czech Republic; Claudio Gutierrez, Universidad de Chile, Chile; Marcos Kiwi, Universidad de Chile, Chile; Nicola Santoro, Carleton University, Canada; and Mihalis Yannakakis, Columbia University, USA. The abstracts of those presentations are included in this volume. In addition, Jozef Gruska and Nicola Santoro accepted our invitation to write full papers related to their talks. Those two surveys are included in the present volume as well. TCS is a biannual conference. The first edition was held in Sendai, Japan, 2000, followed by Montreal, Canada, 2002, and Toulouse, France, 2004.

Algorithmic Puzzles Anany Levitin, Maria Levitin, 2011-10-14

Algorithmic puzzles are puzzles involving well-defined procedures for solving problems. This book will provide an enjoyable and accessible introduction to algorithmic puzzles that will develop the reader's algorithmic thinking. The first part of this book is a tutorial on algorithm design strategies and analysis techniques. Algorithm design strategies: exhaustive search, backtracking, divide and conquer, and a few others are general approaches to designing step-by-step instructions for solving problems. Analysis techniques are methods for investigating such procedures to answer questions about the ultimate result of the procedure or how many steps are executed before the procedure stops. The discussion is at an elementary level, with puzzle examples and requires neither programming nor mathematics beyond a secondary school level. Thus the tutorial provides a gentle and entertaining introduction to main ideas in high-level algorithmic problem solving. The second and main part of the book contains 150 puzzles from centuries-old classics to newcomers often asked during job interviews at computing, engineering, and financial companies. The puzzles are divided into three groups by their difficulty levels. The first fifty puzzles in the Easier Puzzles section require only middle school mathematics. The sixty puzzle of average difficulty and forty harder puzzles require just high school mathematics plus a few topics such as binary numbers and simple recurrences, which are reviewed in the tutorial. All the puzzles are provided with hints, detailed solutions, and brief comments. The comments deal with the puzzle
