Lancaster, 2012-12-06 My original intention was to write a history of medical statistics used in its prewar sense expanding the writings on the subject by Major Greenwood from which I formed many of my ideas in the early days immediately after the Second World War In later years I decided that the scope of his works was narrower than what I think is appropriate now for he was writing in an era before the acceptance and use of the Fisherian methods and he was probably not aware of the mathematization of many parts of biological theory Further the boundary between the medical and biological sciences has largely disappeared Many texts have now been written on branches of the theory and practice inspired by R A Fisher see 4 13 I discuss the history of the use of quantitative methods in the biological sciences defined after the style of Peller 1967 as that branch of science that uses a quantitative approach to or quantitative logical reasoning on or biology The mathematical tech any issue having to do with medicine niques are various and not classified here Within the book I use biological sciences to include medicine but use the longer phrase in its title to avoid misunderstandings as to content Moreover most of the experimental work carried out in medical research laboratories is performed on animals other than man Study Guide for

Freeman, Jon C. Herron, 2001 Designed to help readers learn how to think like evolutionary biologists this 4 color book  
approaches evolutionary biology as a dynamic field of inquiry and as a process Using a theme based approach it illustrates  
the interplay between theory observation testing and interpretation It offers commentary on strengths and weaknesses of  
data sets gives detailed examples rather than a broad synoptic approach includes many data graphics and boxes regarding  
both sides of controversies Introduces each major organizing theme in evolution through a question e.g How has HIV become  
drug resistant Why did the dinosaurs after dominating the land vertebrates for 150 million years suddenly go extinct Are  
humans more closely related to gorillas or to chimpanzees Focuses on many applied reader relevant topics e.g evolution and  
human health the evolution of senescence sexual selection social behavior eugenics and biodiversity and conservation Then  
develops the strategies that evolutionary biologists use for finding an answers to such questions Then considers the  
observations and experiments that test the predictions made by competing hypotheses and discusses how the data are  
interpreted For anyone interested in human evolution including those working in human and animal health care
