Chapter 1 – Introduction: Multinational Enterprise and Multinational Financial Management

Question 1.1

- a. What are the various categories of multinational firms?
- b. What is the motivation for international expansion of firms within each category?

Answer:

- a. Raw materials seekers, market seekers, and cost minimizers.
- b. The raw materials seekers go abroad to exploit the raw materials that can be found there. It just happens that nature didn't place all natural resources domestically. Market seekers go overseas to produce and sell in foreign markets. The cost minimizers invest in lower-cost production sites overseas in order to remain cost competitive both at home and abroad. In all cases, the firms involved recognize that the world is larger than the home country and provides opportunities to gain additional supplies, sell more products or find lower cost sources of production.

Question 1.2

- a. How does foreign competition limit the prices that domestic companies can charge and the wages and benefits that workers can demand?
- b. What political solutions can help companies and unions avoid the limitations imposed by foreign competition?
- c. Who pays for these political solutions? Explain.

Answer:

- a. As domestic producers raise their prices, customers begin substituting less expensive goods and services supplied by foreign producers. The likelihood of losing sales limits the prices that domestic firms can charge. Foreign competition also acts to limit the wages and benefits that workers can demand. If workers demand more money, firms have two choices. Acquiesce in these demands or fight them. Absent foreign competition, the cost of acquiescence is relatively low, particularly if the industry is unionized. Since all firms will face the same higher costs, they can cover these higher costs by all of them simultaneously raising their prices without fear of being undercut or of being placed at a competitive disadvantage relative to their peers. Foreign competition changes the picture since foreign firms' costs will be unaffected by higher domestic wages and benefits. If domestic firms

Principles of Polymer Processing Zehev Tadmor, Costas G. Gogos, 2013-12-02 Thoroughly revised edition of the classic text on polymer processing The Second Edition brings the classic text on polymer processing thoroughly up to date with the latest fundamental developments in polymer processing while retaining the critically acclaimed approach of the First Edition Readers are provided with the complete panorama of polymer processing starting with fundamental concepts through the latest current industry practices and future directions All the chapters have been revised and updated and four new chapters have been added to introduce the latest developments Readers familiar with the First Edition will discover a host of new material including Blend and alloy microstructuring Twin screw based melting and chaotic mixing mechanisms Reactive processing Devolatilization theory mechanisms and industrial practice Compounding theory and industrial practice The increasingly important role of computational fluid mechanics A systematic approach to machine configuration design The Second Edition expands on the unique approach that distinguishes it from comparative texts Rather than focus on specific processing methods the authors assert that polymers have a similar experience in any processing machine and that these experiences can be described by a set of elementary processing steps that prepare the polymer for any of the shaping methods On the other hand the authors do emphasize the unique features of particular polymer processing methods and machines including the particular elementary step and shaping mechanisms and geometrical solutions Replete with problem sets and a solutions manual for instructors this textbook is recommended for undergraduate and graduate students in chemical engineering and polymer and materials engineering and science It will also prove invaluable for industry professionals as a fundamental polymer processing analysis and synthesis reference

Intelligent Signal Processing Simon Haykin, Bart Kosko, 2001-01-15 IEEE Press is proud to present the first selected reprint volume devoted to the new field of intelligent signal processing ISP ISP differs fundamentally from the classical approach to statistical signal processing in that the input output behavior of a complex system is modeled by using intelligent or model free techniques rather than relying on the shortcomings of a mathematical model Information is extracted from incoming signal and noise data making few assumptions about the statistical structure of signals and their environment Intelligent Signal Processing explores how ISP tools address the problems of practical neural systems new signal data and blind fuzzy approximators The editors have compiled 20 articles written by prominent researchers covering 15 diverse practical applications of this nascent topic exposing the reader to the signal processing power of learning and adaptive systems This essential reference is intended for researchers professional engineers and scientists working in statistical signal processing and its applications in various fields such as humanistic intelligence stochastic resonance financial markets optimization pattern recognition signal detection speech processing and sensor fusion Intelligent Signal Processing is also invaluable for graduate students and academics with a background in computer science computer engineering or electrical engineering About the Editors Simon Haykin is the founding director of the Communications Research Laboratory at

McMaster University Hamilton Ontario Canada where he serves as university professor His research interests include nonlinear dynamics neural networks and adaptive filters and their applications in radar and communications systems Dr Haykin is the editor for a series of books on Adaptive and Learning Systems for Signal Processing Communications and Control Publisher and is both an IEEE Fellow and Fellow of the Royal Society of Canada Bart Kosko is a past director of the University of Southern California s USC Signal and Image Processing Institute He has authored several books including Neural Networks and Fuzzy Systems Neural Networks for Signal Processing Publisher copyright date and Fuzzy Thinking Publisher copyright date as well as the novel Nanotime Publisher copyright date Dr Kosko is an elected governor of the International Neural Network Society and has chaired many neural and fuzzy system conferences Currently he is associate professor of electrical engineering at USC
