Virginia Journal of Education, 2000 *Rumba Under Fire: The Arts of Survival from West Point to Delhi* Irina Dumitrescu, 2016 A professor of poetry uses a deck of playing cards to measure the time until her lover returns from Afghanistan. Congolese soldiers find their loneliness reflected in the lyrics of rumba songs. Survivors of the siege of Sarajevo discuss which book they would have never burned for fuel. A Romanian political prisoner writes her memoir in her head. A book no one will ever read. These are the arts of survival in times of crisis. Rumba Under Fire proposes we think differently about what it means for the arts and liberal arts to be in crisis. In prose and poetry the contributors to Rumba Under Fire explore what it means to do art in hard times. How do people teach, create, study and rehearse in situations of political crisis? Can art and intellectual work really function as resistance to power? What relationship do scholars, journalists or even memoirists have to the crises they describe and explain? How do works created in crisis, especially at the extremes of human endurance, fit into our theories of knowledge and creativity? The contributors are literary scholars, anthropologists and poets covering a broad geographic range from Turkey to the United States, from Bosnia to the Congo. Rumba Under Fire includes essays, poetry and interviews by Tim Albrecht, Carla Baricz, Greg Brownderville, William Coker, Andrew Crabtree, Cara De Silva, Irina Dumitrescu, Denis Ferhatovic, Susannah Hollister, Prashant Keshavmurthy, Sharon Portnoff, Anand Taneja and Judith Verweijen. *Discover Science: Teacher's annotated edition*, 1991 Science content helps develop the skills needed to understand how science works, learn new concepts, solve problems and make decisions in today's technological society. *Choice*, 2004 *How to Make an Apple Pie from Scratch* Harry Cliff, 2021-08-10 NAMED A BEST SCIENCE BOOK OF 2021 BY KIRKUS. The Chemical Biology of Carbon Christopher T. Walsh, 2023-04-05 Building upon the previous volumes *The Chemical Biology of Sulfur* *The Chemical Biology of Phosphorus* and *The Chemical Biology of Nitrogen* this book examines the organic chemistry of life *The Chemical Biology of Carbon* It examines chemical biology open to carbon containing natural metabolites that allow both retrospective and predictive behaviours of both biosynthetic and degradative metabolism in primary and secondary pathways This book also notes the centrality of a core set of heterocycles in metabolites and coenzyme forms of vitamins and how that chemistry enables life The organic chemical fundamental considerations are always tied to specific metabolites and metabolic transformations This context makes this volume not a classical organic or even bioorganic approach to organic chemistry in vivo but instead a unique analysis of how the rules and reactivities of organic chemistry underlie the organic chemistry of life *The Chemical Biology of Carbon* is an ideal reference and guide for medicinal chemists chemical biologists organic chemists as well as postgraduate graduate and advanced undergraduate students in these areas and related disciplines
