

CHAPTER TWO

LITERATURE REVIEW

Introduction

This study sought to investigate perceived effect of the use of 21st century technological tools in promoting the teaching and learning of Geography in some selected senior high schools in the Cape Coast Metropolis. The chapter provided appropriate materials relating to the key concepts under consideration in the framework of the study. These include the theoretical review, conceptual review, empirical review and chapter summary.

Theoretical Review

This section reviews theories that form the basis of the study, which try to explain the research question and articulate the already published arguments for verification and critique following the outcomes that shall be realized from this study. The theory reviewed is the Valsiner's zone theory.

Valsiner's Zone Theory

Valsiner's (1997) zone theory was originally designed as an explanatory structure in the field of students' development to apply technology into the teaching and learning setting. Valsiner's (1997) zone theory extends Vygotsky's (1978) concept of the Zone of Proximal Development (ZPD) which is often defined as the gap between students present capabilities and the higher level of performance that could be achieved with appropriate assistance to incorporate the social setting and the goals and actions of participants using technology. Valsiner (1997) added two zones: the Zone of Free Movement (ZFM) and Zone of Promoted Action (ZPA) to Vygotsky's Zone of Proximal Development.

Program scheduling and simulation in an operating system environment bernard lampard, 2014-02-03 Research Paper postgraduate from the year 2011 in the subject Computer Science Commercial Information Technology grade A Massachusetts Institute of Technology language English abstract CPU scheduling is a technique used by computer operating systems to manage the usage of the computer's central processing unit In a multi programming environment whereby several processes are running on the same processor it is essential to use scheduling criteria to avoid collisions in the computer's operations This will help users in a given information technology oriented firm to share server spaces and resources like printers and file storage spaces In the multi tasking environment a program called CPU scheduler selects one of the ready processes and allocates the processor to it There are a number of occasions when a new process can or must be chosen to run When a running process block and changes its state to Blocked When a timer for a running process expires When a waiting process unblocks and changes its state to Ready and When a running process terminates and changes its state to Exit Wikipedia 2013 Different types of scheduling programs referred to as algorithms can be employed in CPU scheduling instances Among the most popular scheduling algorithms is Shortest Job First SJF SJF gives the processor to the process with the shortest next time allocation known as the burst If there are processes with similar CPU bursts in the event queue the scheduler uses First Come First Served algorithm which allocates the first process to arrive in the queue to the processor regardless of its burst time It operates under the assumption that the length of the next CPU burst of each of the processes in ready queue is known CPU scheduling 2013 The SJF algorithm can be used in both pre-emptive and non-preemptive methods The algorithm can be preemptive or not Shortest Job First with preemption uses priority measure to determine the next process to be given the CPU The processes will be having different CPU bursts and different priority levels allocated to them The process with the least priority magnitude is always picked next A process already allocated the processor can be preempted the CPU and allocation done to another process with higher priority when such a process arrives in the queue SJF with non-preemptive operates in the normal procedure whereby the job with the least CPU burst in the waiting queue is always picked next for allocation of the CPU and the rest of the processes have to wait no matter their urgency Based on the

introduction above it is essential to use the right CPU scheduling strategy to help us achieve

design was employed in the study A multi stage sampling technique was used to select 200 female junior high school students Data collection was carried out from the students in their schools and homes using a pre tested structured questionnaire The data were entered into a computer using Excel and then exported to SPSS for Windows version 22 for analysis Bivariate and multivariate logistic regression analysis was done at 95 % confidence interval

The Effect of Founder-CEO Overconfidence on Merger Premium Christoph Meyer,2015-05-08 Master s Thesis from the year 2014 in the subject Business economics Investment and Finance grade 1 0 Heriot Watt University Edinburgh Finance course Corporate Finance language English abstract Theoretical and empirical research has indicated that overconfidence affects merger decision making and merger premium However founder CEOs have not been subject of such a study yet This lack is particular surprising when considering the differences between founder and manager CEOs as well as the media attention of founder CEOs The present dissertation aims to fill the research gap through investigating the effect of founder CEO overconfidence on merger premium in the high tech industry Moreover this dissertation aims to extend the literature by including target CEO overconfidence and studying the impact on merger premium when both acquirer and target CEO are overconfident By studying founder CEOs this dissertation also aims to establish the effectiveness of founders as CEOs The resource based perspective argues that while founders help in the early years of the company they become less effective as the firm evolves since they lack the necessary management skills Design methodology approach Using ordinary least square OLS technique this study investigates the effects of implemented factors in determining the merger premium paid in high tech acquisitions A sample consisting of 245 acquisitions in the high tech industry of 124 CEOs during a 19 year period 1995 to 2013 has been observed In order to test the founder CEO effects this dissertation develops a matched sample approach of 62 founder CEOs and 62 manager CEOs This study shows a strong relationship between CEO overconfidence and acquisitions premium paid The results suggest that the CEO overconfidence may provide an explanation for the well rehearsed overpayment problem An additional analysis indicates that the highest premium is paid when combined acquiring and target firm CEO overconfidence exist The dissertation also shows that founder CEOs pay higher premia than manager CEOs in the high tech industry It has been proven that founder CEOs decisions are more independent from interventions of the board of directors and that founder CEO overpayment is not dependent on the company s size or relatedness of mergers The findings are reliable as the results remain constant for applied robustness tests
