Miombo Woodlands in a Changing Environment: Securing the Resilience and Sustainability of People and Woodlands Natasha S. Ribeiro, Yemi Katerere, Paxie W. Chirwa, Isla M. Grundy, 2020-09-16 Based on work by the Miombo Network in southern Africa this book helps decision makers and general readers alike improve their understanding of the socio ecology of the Miombo woodlands across southern Africa It also highlights the importance of and the need for further research on the unique Miombo ecology and its link with economic development One major challenge facing these woodlands is the influence that direct both natural and anthropogenic and indirect drivers of change as well as interactions between these have had over the centuries As such the book explores the socio economic and ecological interactions that occur in these woodlands and discusses the need for further research to provide a better understanding of these interactions Drawing on data and information from numerous studies conducted in the last 20 years the book presents a comparative analysis of policy changes and management experiences in the countries concerned It also addresses issues of global climate change since they have an impact on Miombo ecosystem management and restoration and provides future projections based on an assessment of how climate change has affected the Miombo woodlands in the past

Processes, Mechanisms and Solutions in Coastal Wetland to Adapt to Changing Environment Qing Wang, Dongdong Shao, Yu Zhang, Qin Zhu, 2025-06-05 Coastal wetlands provide precious ecological services for us like coastal protection carbon storage flooding mitigation production and so on Mangrove saltmarsh sea grass oyster reef and coral reef are typical types of coastal wetland each type has its unique adaptive strategy to climate change through some processes and mechanisms Some of them are well known to us but most are unrecognized as they are far away from our living environment Furthermore in the context of climate change and anthropogenic influence the external disturbance is more complicated and changeable causing the responses of species and the related processes more secluded and unpredictable Therefore the multilevel processes or mechanisms in coastal wetland to adapt to climate change as well as the solutions is urgent and important to face the new challenges Coastal wetlands lie in the transition zone between lands and seas defending us from storms and floodings and providing important and valuable ecosystem services such as carbon stock and biodiversity maintenance However coastal wetlands are vulnerable and are one of the most physically disturbed ecosystems on earth because they are always in hydrodynamic conditions under the interactions among tides waves runoffs and so on Furthermore the combined impacts of climate change and human activities have caused more uncertainties and complexities on the environmental factors which imposed unparalleled impacts on the diversity distribution and ecological performance of coastal wetland ecosystem globally
