ABSTRACT

This paper demonstrates how digital documentation projects support engagement, analysis and interpretation of the reconstruction of Notre Dame de Paris, as well as demonstrating the underpinning processes by which the documentation itself is generated and managed. The digital documentation project is the scientific website which forms a digital ecosystem to support the reconstruction project, the reuse of the datasets is analysed in the original heritage discipline and across other disciplines by the OAIS reference model. Then, critically consider the main challenges to be for this project and how they are addressed.

1. INTRODUCTION TO DIGITAL DOCUMENTS

A fire broke out at Notre Dame Cathedral in Paris on April 15, 2019. The spire collapsed on the last two spans of the nave and most of the timber roof was gone above the vaulted ceilings.[1] People mobilized like never before and began building a massive repair system. By mobilizing donations from individuals, businesses and communities worldwide, a national donation was established in September 2019. The funds will be used for conservation and restoration work and the training of relevant personnel. On July 29, 2019, the Notre Dame Cathedral Restoration and Protection Act was adopted to ensure the implementation of the project. A public administration agency was established on December 1, 2019, and an official website[2] for the release of restoration project information was established. An assessment study was conducted in June 2020 to develop an overall health assessment of the building and determine the direction of the restoration project.

The day after the fire broke out, the French Ministry of Culture and the National Center for Scientific Research (CNRS) launched a huge restoration and scientific research project in parallel with the restoration project[3]. The two projects support each other and have multiple overlapping aspects of research questions and research teams. The scientific project brings together researchers and laboratories from across France and is coordinated by Martine Regert (CNRS), Aline Magnien (MC), Philippe Dillmann (CNRS) and Pascal Liévaux (MC), setting up nine topics including the "Digital Group" Working Group[4].

The project aims to establish the cathedral's digital ecosystem, creating a database that will be continuously updated as the restoration project progresses, while also providing data services. In terms of the use of data, nine working groups participating in scientific projects upload data information to the data storage center at any time, forming the basis of the digital ecosystem. The data in the system is also open to restoration projects. For two major cross-cutting projects, one is the restoration of wooden roofs, involving materials (wood, metal), architecture, and mechanics; the other
