## Description

MX addressable stations contain an integral addressable module that constantly monitors status and communicates with an MX Loop Module located in the host fire alarm control unit.

## Operation

Activation of the A4099-5213 single action manual station requires a firm downward pull to activate the alarm switch. Completing the action breaks an internal plastic break-rod (visible below the pull lever, use is optional). The break-rod can act as a deterrent to vandalism without interfering with the minimum pull requirements needed for easy activation. The pull lever latches into the alarm position and remains extended out of the housing to provide a visible indication.

**A4099-5212 double action stations (breakglass)** Strike the front-mounted hammer to break the glass and expose the recessed pull lever. The pull lever then operates as a single action station.

**Station reset** requires the use of a key to reset the manual station lever and deactivate the alarm switch. If the break-rod is used, it must be replaced.

**Station testing** Pull the lever to test the station. Electrical testing is performed by unlocking the station housing to activate the alarm switch.
