Feature Technology for High-Frequency Electronics. Optimization, Modeling, and Design Automation Anna Pietrenko-Dabrowska, Slawomir Koziel, 2023-10-16 This book discusses response feature technology and its applications to modeling optimization and computer aided design of high frequency structures including antenna and microwave components By exploring the specific structure of the system outputs feature based approaches facilitate simulation driven design procedures both in terms of improving their computational efficiency and reliability These benefits are associated with the weakly nonlinear relationship between feature point coordinates and design variables which in the context of optimization leads to inherent regularization of the objective functions The book provides an overview of the subject a definition and extraction of characteristic points and feature based design problem reformulation It also outlines a number of numerical algorithms developed to handle local global and multi criterial design surrogate modeling as well as uncertainty quantification The discussed frameworks are extensively illustrated using examples of real microwave and antenna structures along with numerous design cases Introductory material on simulation driven design numerical optimization as well as behavioral and physics based surrogate modeling is also included The book will be useful for readers working in the area of high frequency electronics including microwave engineering antenna design microwave photonics magnetism and especially those who utilize electromagnetic EM simulation models in their daily routines Performance-Driven Surrogate

Modeling of High-Frequency Structures Slawomir Koziel, Anna Pietrenko-Dabrowska, 2020-02-19 This book discusses surrogate modeling of high frequency structures including antenna and microwave components The focus is on constrained or performance driven surrogates The presented techniques aim at addressing the limitations of conventional modeling methods pertinent to the issues of dimensionality and parameter ranges that need to be covered by the surrogate to ensure its design utility Within performance driven methodologies mitigation of these problems is achieved through appropriate confinement of the model domain focused on the regions promising from the point of view of the relevant design objectives This enables the construction of reliable surrogates at a fraction of cost required by conventional methods and to accomplish the modeling tasks where other techniques routinely fail The book provides a broad selection of specific frameworks extensively illustrated using examples of real world microwave and antenna structures along with numerous design examples Furthermore the book contains introductory material on data driven and physics based surrogates The book will be useful for the readers working in the area of high frequency electronics including microwave engineering antenna design microwave

photonics magnetism especially those that utilize electromagnetic EM simulation models in their daily routines Covers performance driven and constrained modeling methods not available in other books to date Discusses of a wide range of practical case studies including a variety of microwave and antenna structures Includes design applications of the presented modeling frameworks including single and multi objective parametric optimization Banger Zeitschriften 2009 ,2009
