Introduction to AutoCAD 2020 Paul F. Richard, 2019-07-29 Introduction to AutoCAD 2020 addresses advances in technology and introduces students to 2 dimensional drawing skills and commands using the 2020 release of AutoCAD. Straightforward explanations focus on actual drawing procedures and illustrations show what to expect on the computer screen. It continuously builds on concepts covered in previous chapters, contains exercises combined with in-text notes and offers examples that provide the how and why of AutoCAD fundamentals. Projects are included at the end of each chapter and provide hands-on experience creating various types of mechanical, architectural, civil and electrical drawings. This text is appropriate for introductory and intermediate AutoCAD courses. Introduces AutoCAD drafting skills, editing techniques, working with complex objects, annotating drawings, outputting your work, advanced drawing and construction methods and collaborating with others on the web. Pedagogy reinforces learning objectives throughout with chapter objectives, key term definitions, command grids that concisely offer multiple ways of achieving task at hand and discipline icons that identify the field of study throughout. New version icons highlight new software features quickly. Hands-on exercises appear throughout the text to reinforce learning and end-of-chapter projects require students to demonstrate a full understanding of the concepts presented in the chapter. Introduction to AutoCAD 2020 provides students with the tools they need to develop drafting skills with AutoCAD.

*Instant Inventor* Stephen J. Ethier, Christine A. Ethier, 2004 Instant Design Fundamentals of Autodesk Inventor R 6, another text in the Instant Design and Drafting series, continues the tradition of delivering technical information in a quick and easy format. The text contains a number of features that make the basic ideas more concrete and clear. These include a list of Key Concepts at the start of each chapter, an In a Nutshell conclusion to each chapter, brief Hands On labs throughout each chapter to reinforce newly learned concepts, an integrated CD ROM that contains hands-on practice and 30 solid models.

**Greenhouse Design and Control** Pedro Ponce, Arturo Molina, Paul Cepeda, Esther Lugo, Brian MacCleery, 2014-09-11 Agricultural production is one of the main keys to the development of healthy societies. It is anticipated that agricultural systems will increasingly have to contend with temperature, humidity and water stress in the near future. This makes the need to increase the efficiency of land and water use ever more urgent. The control and design of greenhouses allows to increase dramatically the quality of crops and extend the cultivation period year-round. A properly designed autonomous greenhouse based on hydroponics can greatly reduce the amounts of nutrients and energy expended in agricultural production. This book deals with different types of greenhouses, materials, structures, advanced control techniques and tendencies that are needed for designing and controlling an advanced greenhouse. The control system is presented as an integral system which covers the explanation of basic and advanced concepts for a real-time controller. Also, structural analysis is introduced whereby mechanical design is regarded as a key factor. The book incorporates simulations and experimental results and utilizes LabVIEW and ADAMS software. Finally, it provides a perspective on the present state and future of greenhouses globally. Written in a highly accessible manner, this book will prove useful to horticulturalists.
