Autodyn Theory Manual:

Godunov Methods E.F. Toro, 2001-12-31 This edited review book on Godunov methods contains 97 articles all of which were presented at the international conference on Godunov Methods Theory and Applications held at Oxford in October 1999 to commemorate the 70th birthday of the Russian mathematician Sergei K Godunov The meeting enjoyed the participation of 140 scientists from 20 countries one of the participants commented everyone is here meaning that virtually everybody who had made a significant contribution to the general area of numerical methods for hyperbolic conservation laws along the lines first proposed by Godunov in the fifties was present at the meeting Sadly there were important absentees who due to personal circumstance could not attend this very exciting gathering The central theme of the meeting and of this book was numerical methods for hyperbolic conservation laws following Godunov's key ideas contained in his celebrated paper of 1959 But Godunov's contributions to science are not restricted to Godunov's method *Proceedings of the 2012*

International Conference on Communication, Electronics and Automation Engineering George Yang, 2012-08-14 This book is a collection of selected papers from the 2011 International Conference on Communications Electronics and Automation Engineering held in Xi'an China August 23-25 2012 It presents some of the latest research findings in a broad range of interdisciplinary fields related to communications electronics and automation engineering Specific emphasis is placed on the following topics automation control data mining and statistics simulation and mathematical modeling human factors and cognitive engineering web technology optimization and algorithm and network communications The prime objective of the book is to familiarize the readers with cutting edge developments in the research of electronics and automation engineering with a variety of applications Hopefully the book can help researchers to identify research trends in many areas to learn the new methods and tools and to spark innovative ideas **Hyper-Velocity Impacts on Rubble Pile Asteroids** Jakob

Deller, 2016-12-01 The thesis presents a tool to create rubble pile asteroid simulants for use in numerical impact experiments and provides evidence that the asteroid disruption threshold and the resultant fragment size distribution are sensitive to the distribution of internal voids This thesis represents an important step towards a deeper understanding of fragmentation processes in the asteroid belt and provides a tool to infer the interior structure of rubble pile asteroids Most small asteroids are rubble piles re-accumulated fragments of debris from earlier disruptive collisions The study of fragmentation processes for rubble pile asteroids plays an essential part in understanding their collisional evolution An important unanswered question is what is the distribution of void space inside rubble pile asteroids As a result from this thesis numerical impact experiments can now be used to link surface features to the internal structure and therefore help to answer this question Applying this model to asteroid Teins which was imaged from close range by the Rosetta spacecraft a large hill-like structure is shown to be most likely primordial while a catena of pits can be interpreted as evidence for the existence of fracturing of pre-existing internal voids Concrete Structures Under Projectile Impact Qin Fang, Hao Wu, 2017-03-22 In this book the

authors present their theoretical experimental and numerical investigations into concrete structures subjected to projectile and aircraft impacts in recent years Innovative approaches to analyze the rigid mass abrasive and eroding projectile penetration and perforation are proposed Damage and failure analyses of nuclear power plant containments impacted by large commercial aircrafts are numerically and experimentally analyzed Ultra high performance concrete materials and structures against the projectile impact are developed and their capacities of resisting projectile impact are evaluated This book is written for the researchers engineers and graduate students in the fields of protective structures and terminal ballistics
