Real Time Monitoring Using Radio Frequency* Muhammad Junaid,2015-02-10 Research Paper postgraduate from the year 2015 in the subject Engineering Power Engineering grade N A course Electrical Power Engineering language English abstract The main objective of this Research project is to build such a prototype system which can control and monitor the flow of water from water reservoir This new system uses microcontroller as a central part to sense the water through a NAND gate Integrated Circuit and inform the microcontroller On the basis of gathered results the controller will open the solenoid valve and also will send the information to the main unit On the main unit side this information will be displayed on the LCD Liquid Crystal Display Where for real time monitoring a wireless camera is used which sends the real time video to the receiver side through RF Radio Frequency module The Engineering Index Annual ,1992 Since its creation in 1884 Engineering Index has covered virtually every major engineering innovation from around the world It serves as the historical record of virtually every major engineering innovation of the 20th century Recent content is a vital resource for current awareness new production information technological forecasting and competitive intelligence The world s most comprehensive interdisciplinary engineering database Engineering Index contains over 10 7 million records Each year over 500 000 new abstracts are added from over 5 000 scholarly journals trade magazines and conference proceedings Coverage spans over 175 engineering disciplines from over 80 countries Updated weekly Electrical & Electronics Abstracts ,1997 **Fern Ridge Dam Automatic Spillway Gate Control** United States. Army. Corps of Engineers. Portland District,1940 **Design and Implementation of a Parking Gate Controller Using Atmega3289 Microcontroller** Pruthviraja Bhupal,2017 The objective of this project is to design a cost effective Parking gate controller for a sliding gate Atmel based microcontroller is used to control the whole operation The parking gate controller system has to auto detect the automobile and open the gate if it is moving out of the parking lot or use a RF remote to open the gate If the automobile is moving inside the parking lot

then RF remote is used to control the gate operation An obstacle sensor is used to detect the presence of the obstacles in the way of the gate When the gate is closing from an open position and if there is any obstacle in its way then the obstacle sensor detects it the controller opens the gate The system is designed using Arduino microcontroller embedded system and the design is done using its Integrated Development Environment and embedded C The design presented in this project is flexible for any of the microcontroller family not just restricting it to the Arduino embedded system Easy installation and working procedure are explained in this project

Automatic Unmanned Railway Gate Control Using Solar and Object Sensor Kalaivani M,2019 This paper discusses about solar based automatic unmanned railway gate using object sensor was used to avoid accident both on the gate and on the track It consists of two IR sensors and by using those sensors the accident was avoided in the gate If the vehicle got struck on the railway track during the closing of railway gate the ultrasonic wave travel and touches the body of the object and reflected back The reflected waves are received by the receiver on the train the distance was measured and displayed on the digital display to the train driver By using above formula the distance of the object from train was calculated and by using that accident was avoided Ultrasonic waves it travel very fast in air medium which is 0 0004 rayls
