The Autopage Starter with Remote Entry System has been designed to be installed on Transponder systems with an Autopage transmitter (DS-434).

1. Mount the unit where there is a vehicle transponder system.

The system must be installed and tested through a safety switch so it will not start in any forward or reverse gear.

Some Autopage transponder systems may use the DS-434 system with a remote starter and have a mechanical key lock safety switch instead of electrical safety switch. The mechanical key lock does not interrupt the starter circuit when the transponder is in any gear and does not allow the 100% level of safety required for remote starting systems. Therefore, our system should never be installed on any vehicle that uses a mechanical key lock safety switch.

Once you install the system, you must verify that the vehicle will not start in any forward or reverse gear regardless of the type of vehicle.

2. Mount the system where there is a vehicle transponder system that can properly complete the installation. There is a possibility that the system cannot be installed on some Autopage transponder vehicles.

3. Some vehicles have an ABS or air system. Some vehicles can start but do not start in any forward or reverse gear.

4. Disconnect the air battery before beginning work on the system.

5. Check battery grounds before driving any vehicle. Ensure that no wiring terminals or other components are located between the battery that would otherwise be damaged.

6. Do not use conventional jump box, battery or any wiring that wiring, i.e. repair parts will possibly obstruct connectivity into the start system and may result in false alarm or incorrect operation. The suggested installing of connection points.

7. Install the wiring neatly under carpets or under seat to prevent possible damage to wires.
