

The BP Golden Rules of Safety

Safety is a legitimate personal expectation and a constant individual responsibility.

Every member of staff should be able to go home at the end of the working day without having suffered or caused harm in any way.

In a world, and an industry, full of risks this goal can only be achieved if every single person remembers the importance of safety, accepts their personal responsibility, and knows what to do. These simple golden rules provide basic guidance. I ask every individual to read them and to act upon them. The safety of everyone depends on our common commitment to the highest standards of care at all times and in all circumstances.

John Browne

December 2000

permit to work

The Golden Rule says:

Before conducting work that involves confined space entry, work on energy systems, ground disturbance or locations where buried hazards may exist, or hot work in potentially explosive environments, a permit must be obtained that:

- defines scope of work
- identifies hazards and assesses risk
- establishes control measures to eliminate or mitigate hazards
- links the work to other associated work permits or simultaneous operations
- is authorized by the responsible personnel
- communicates above information to all involved in the work
- ensures adequate control over the return to normal operations

energy isolation

The Golden Rule says:

Any isolation of energy systems, mechanical, electrical, process, hydraulic and others, cannot proceed unless:

- the method of isolation and discharge of stored energy are agreed and executed by a competent person(s)
- any stored energy is discharged
- a system of locks and tags is utilized at isolation points
- a test is conducted to ensure the isolation is effective
- isolation effectiveness is periodically monitored

ground disturbance

The Golden Rule says:

Work that involves a man-made cut, utility trench or dispersion in the earth's surface formed by earth removal cannot proceed unless:

- a hazard assessment of the work site is completed by the competent person(s)
 - all underground hazards, i.e. pipelines, electric cables, etc., have been identified, located and if necessary, isolated
- Where persons are to enter an excavation:
- a confined space entry permit must be issued if the entry meets the confined space definition
 - ground movement must be controlled and collapse prevented by systematically shoring, sloping, benching, etc., as appropriate
 - ground and environmental conditions must be continuously monitored for change

confined space entry

The Golden Rule says:

Entry into any confined space cannot proceed unless:

- all other options have been ruled out
- permit is issued with authorization by a responsible person(s)
- permit is communicated to all affected personnel and posted, as required
- all persons involved are competent to do the work
- all sources of energy affecting the space have been isolated
- testing of atmosphere is conducted, verified and repeated as often as defined by the risk assessment
- stand-by person is stationed
- unauthorized entry is prevented

working at heights

The Golden Rule says:

Working at heights of 2 metres (6 feet) or higher above the ground cannot proceed unless:

- a fixed platform is used with guard or hand rails, verified by a competent person, or ...
- full arrest equipment is used that has:
 - a proper anchor mounted uniformly overhead
 - full body harness using double back and leading snap hooks at each attachment
 - synthetic fibre lifelines
 - shock absorber
- full arrest equipment will limit free fall to 2 metres (6 feet) or less
- a visual inspection of the full arrest equipment and system is completed and any equipment that is damaged or has been activated is taken out of service
- personnel are competent to perform the work

lifting operations

The Golden Rule says:

Lifts utilizing cranes, hoists, or other mechanical lifting devices will not commence unless:

- an assessment of the lift has been completed and the lift method and equipment has been determined by a competent person(s)
- operators of powered lifting devices are trained and certified for that equipment
- rigging of the load is carried out by a competent person(s)
- lifting devices and equipment have been verified for use within the last 12 months (at a minimum)
- load does not exceed dynamic and/or static capacities of the lifting equipment
- any safety devices installed on lifting equipment are operational
- all lifting devices and equipment have been visually

driving safety

The Golden Rule says:

All categories of vehicles, including self-propelled mobile plant, must not be operated unless:

- vehicle is fit for purpose, inspected and confirmed to be in safe working order
- number of passengers does not exceed manufacturer's design specifications for the vehicle
- loads are secure and do not exceed manufacturer's design specifications or legal limits for the vehicle
- seat belts are installed and worn by all occupants
- safety helmets are worn by riders and passengers of motorcycles, bicycles, quads, snow-mobiles and similar types of vehicle

Drivers must not be authorized to operate the vehicle unless:

- they are trained, certified and medically fit to operate the class of vehicle
- they are not under the influence of alcohol or drugs, and are not suffering from fatigue
- they do not use hand-held cell phones and radios while driving (best practice is to switch-off all phones and two-way radios when driving)

management of change

The Golden Rule says:

Work arising from temporary and permanent changes to organization, personnel, systems, process, procedures, equipment, products, materials or substances, and laws and regulations cannot proceed unless a Management of Change process is completed, where applicable, to include:

- a risk assessment conducted by all impacted by the change
- development of a work plan that clearly specifies the timescale for the change and any control measures to be implemented regarding:
 - equipment, facilities and process
 - operations, maintenance, inspection procedures
 - training, personnel and communication
 - documentation
- authorization of the work plan by the responsible personnel through completion

Powers' Central Station Directory and Buyers' Manual, 1900 **Molecular Diagnostic PCR Handbook** Gerrit J. Viljoen, Louis H. Nel, John R. Crowther, 2005-12-06 PREFACE The Joint FAO IAEA Division of Nuclear Techniques in Food and Agriculture is involved in agricultural research and development and assists Member States of FAO and IAEA in improving strategies to ensure food security through the use of nuclear techniques and related biotechnologies where such techniques have a valuable and often unique role. In particular, molecular diagnostic methods have rapidly evolved in the past twenty years since the advent of the Polymerase Chain Reaction (PCR). They are used in a wide range of agricultural areas such as improving soil and water management, producing better crop varieties, diagnosing plant and animal diseases, controlling insect pests, and improving food quality and safety. The uses of nucleic acid directed methods have increased significantly in the past five years and have made important contributions to disease control country programmes for improving national and international trade. These developments include the more routine use of PCR as a diagnostic tool in veterinary diagnostic laboratories. However, there are many problems associated with the transfer and particularly the application of this technology. These include lack of consideration of the establishment of quality assured procedures, the required set up of the laboratory and the proper training of staff. This can lead to a situation where results are not assured. This book gives a comprehensive account of the practical aspects of PCR and strong consideration is given to ensure its optimal use in a laboratory environment. This includes the setting up of a PCR laboratory. Good Laboratory Practice and standardised PCR protocols.
