Greenhouse Design and Control Pedro Ponce, Arturo Molina, Paul Cepeda, Esther Lugo, Brian MacCleery, 2014-09-11

Agricultural production is one of the main keys to the development of healthy societies. It is anticipated that agricultural systems will increasingly have to contend with temperature humidity and water stress in the near future. This makes the need to increase the efficiency of land and water use ever more urgent. The control and design of greenhouses allows to increase dramatically the quality of crops and extend the cultivation period year round. A properly designed autonomous greenhouse based on hydroponics can greatly reduce the amounts of nutrients and energy expended in agricultural production. This book deals with different types of greenhouses materials structures advanced control techniques and tendencies that are needed for designing and controlling an advanced greenhouse. The control system is presented as an integral system which covers the explanation of basic and advanced concepts for a real time controller. Also structural analysis is introduced whereby mechanical design is regarded as a key factor. The book incorporates simulations and experimental results and utilizes LabVIEW and ADAMS software. Finally it provides a perspective on the present state and future of greenhouses globally. Written in a highly accessible manner this book will prove useful to horticulturalists agricultural engineers greenhouse engineers and designers. Its easy to absorb contents are also suitable for under graduate students and researchers in agricultural and electronic engineering horticulture crop cultivation and soft computing.

Integrated Waste Biorefineries: Achieving Sustainable Development Goals, 2nd edition Mohammad Rehan, Muhammad Amjad, Ala'A Al-Muhtaseb, Muhammad Abdul Qyyum, Konstantinos Moustakas, Su Shiung Lam, Abdul-Sattar Nizami, Meisam Tabatabaei, Imtiaz Ali, Arshid Mahmood Ali, Muhammad Farooq, 2024-01-11. The United Nations Sustainable Development Goals (SDGs) are designed to revolutionize societies to prepare for the future challenges. However the practical implementation of such goals in many domains is yet to be achieved despite of unique essence. Sustainable energy production aligned with SDG 7 clean water and sanitation aligned with SDG 6 sustainable waste services aligned with SDG 11 and mitigating climate change impacts aligned with SDG 13 have been the prime focus of SDGs. Moreover much attention is being paid to research and development activities on waste prevention reduction recycling and reuse to achieve responsible consumption and production aligned with SDG 12. Waste biorefineries have emerged as a sustainable environmental management solution to achieve not only the aforementioned SDGs but also to accomplish no poverty aligned with SDG 1 and zero hunger aligned with SDG 2 and to maintain well being and good health aligned with SDG 3 and decent work and economic growth aligned with SDG 8 worldwide. This is true because integrated waste biorefineries can efficiently and sustainably produce fuels heat energy power and multiple value added products and chemicals. It can further facilitate the transition from linear to circular economies and mitigate the major challenges faced including environmental pollution climate change and adverse effects on public health. This Research Topic will focus on different types of waste biorefineries.
