Sapient Circuits and Digitalized Flesh Matthew E. Gladden, 2018-03-14 This book develops new insights into the evolving nature of organizations by applying the methodologies of posthumanist thought to the fields of organizational theory and management. An emerging organizational posthumanism is described that makes sense of the ways in which forces of technological posthumanization are reshaping the members, personnel, structures, information systems, processes, physical and virtual spaces, and external environments available for use by organizations. Conceptual frameworks and analytic tools are formulated that diagnose the convergence in the capacities of human and artificial actors generated by new technologies relating to human augmentation, synthetic agency, and digital physical ecosystems. As the first systematic study of these topics, this text will interest scholars and students of organizational management and management practitioners who grapple on a daily basis with the forces of technologization that are increasingly powerful drivers of organizational change.
