Modeling and Simulation of Automatic Street Light Controller Independently Published, 2018-08-30 Automatic Street Light Control System is a simple yet powerful concept which uses transistor as a switch By using this system manual works are 100% removed It automatically switches ON lights when the sunlight goes below the visible region of our eyes This is done by a sensor called Light Dependant Resistor LDR which senses the light actually like our eyes It automatically switches OFF lights whenever the sunlight comes visible to our eyes By using this system energy consumption is also reduced because nowadays the manually operated street lights are not switched off even the sunlight comes and also switched on earlier before sunset In this project no need of manual operation like ON time and OFF time setting This project clearly demonstrates the working of transistor in saturation region and cut off region
