Transactional Agents Khaled Nagi,2003-06-30 The term agent is one of those catchwords that mean widely differing things to different people To telecommunications people it is little more than a mobile piece of code that may be executed at any place At the other extreme AI people often associate with agents human like traits such as social behavior In between software people view agents as fairly self contained pieces of software that at the low end pretty much act like objects and at the high end more or less automatically decide when and how to react to stimuli or proactively initiate effects that can be observed from their environment Software agents are particularly important when it comes to distributed environments There much of the communication takes place asynchronously that is the sequence of events cannot be planned ahead in all detail Instead agents are given rules as to how to interpret the current situation and given a common goal so that they adjust their response accordingly
