Highway Bridge, Minneapolis, Minnesota, August 1, 2007 United States. National Transportation Safety Board,2008 In the early afternoon construction equipment and construction aggregates sand and gravel for making concrete were delivered and positioned in the two closed inside southbound lanes The equipment and aggregates which were being staged for a concrete pour of the southbound lanes that was to begin about 7 00 p m were positioned toward the south end of the center section of the deck truss portion of the bridge and were in place by about 2 30 p m About 6 05 p m a motion activated

surveillance video camera at the Lower St Anthony Falls Lock and Dam just west of the I 35W bridge recorded a portion of the collapse sequence The video showed the bridge center span separating from the rest of the bridge and falling into the river

Innovative Bridge Design Handbook Alessio Pipinato,2021-09-08 Innovative Bridge Design Handbook Construction Rehabilitation and Maintenance Second Edition brings together the essentials of bridge engineering across design assessment research and construction Written by an international group of experts each chapter is divided into two parts the first covers design issues while the second presents current research into the innovative design approaches used across the world This new edition includes new topics such as foot bridges new materials in bridge engineering and soil foundation structure interaction All chapters have been updated to include the latest concepts in design construction and maintenance to reduce project cost increase structural safety and maximize durability Code and standard references have been updated Completely revised and updated with the latest in bridge engineering and design Provides detailed design procedures for specific bridges with solved examples Presents structural analysis including numerical methods FEM dynamics risk and reliability and innovative structural typologies

Bridge Load Rating Rafael Armendariz,Mark Bowman,2018-08-15 The inspection and evaluation of bridges in Indiana is critical to ensure their safety to better serve the citizens of the state Part of this evaluation includes bridge load rating Bridge load rating which is a measure of the safe load capacity of the bridge is a logical process that is typically conducted by utilizing critical information that is available on the bridge plans For existing poorly documented bridges however the load rating process becomes challenging to adequately complete because of the missing bridge information Currently the Indiana Department of Transportation INDOT does not have a prescribed methodology for such bridges In an effort to improve Indiana load rating practices INDOT commissioned this study to develop a general procedure for load rating bridges without plans The general procedure was developed and it was concluded that it requires four critical parts These parts are bridge characterization bridge database field survey and inspection and bridge load rating The proposed procedure was then evaluated on two bridges in Indiana that do not have plans as a proof of concept As a result it was concluded that load rating of bridges without plans can be successfully completed using the general procedure A flowchart describing the general procedure was created to make the load rating process more user friendly Additional flowcharts that summarize the general procedure for different type of bridges were also provided

Bridge Inspection Practices George Hearn,National Cooperative Highway Research Program,2007 This synthesis reports bridge inspection practices in the United States and selected foreign countries The synthesis is a collection of information on formal inspection practices of departments of transportation DOTs These are primarily visual inspections and they provide data to bridge registries and databases For U S inspection practices this synthesis reports on inspection personnel inspection types and inspection quality control and quality assurance Staff titles and functions in inspection programs are reported together with qualifications and training of personnel formation of inspection teams and assignment

Subcommittee on Bridges and Structures,2008 A new all inclusive manual that incorporates Allowable Stress Load Factor and Load and Resistance Factor Rating methods into one publication This manual provides guidelines for the procedures and policies for determining the physical condition maintenance needs and load capacity of highway bridges Rating examples are also included It has been developed to assist bridge owners in establishing inspection procedures and evaluation practices that meet the National Bridge Inspection Standards NBIS **Manual for Condition Evaluation of Bridges, 1994** American Association of State Highway and Transportation Officials. Subcommittee on Bridges and Structures,2000 This Manual has been developed to assist Bridge Owners by establishing inspection procedures And load rating practices that meet the National Bridge Inspection Standards NBIS The Manual has been divided into seven sections with each section representing a distinct phase of an overall bridge inspection and load rating program Section 1 contains introductory and background information on the maintenance inspection of bridges as well as definitions of general interest terms Key components of a comprehensive bridge file are defined in Section 2 The record of each bridge in the file provides the foundation against which changes in physical condition can be measured Changes in condition are determined by field inspections The types and frequency of field inspections are discussed in Section 3 as well as specific inspection techniques and requirements Conditions at a bridge site may require more elaborate material tests and various testing methods are discussed in Section 4 Field load testing is a

means of supplementing analytical procedures in determining the live load capacity of a bridge and for improving the confidence in the assumptions used in modeling the bridge This is described in Section 5 Section 6 discusses the load rating of bridges and includes optional rating methods The evaluation of fatigue and other special conditions are discussed in Section 7 The successful application of this Manual is directly related to the organizational structure established by the Bridge Owner Such a structure should be both effective and responsive so that the unique characteristics and special problems of individual bridges are considered in developing an appropriate inspection plan and load capacity determination
