Big Walnut Apes Practice Quiz Chapter 1

Scott A. Elias

Big Walnut Apes Practice Quiz Chapter 1:

Origins of Human Innovation and Creativity Scott A. Elias, 2012-12-31 Innovation and creativity are two of the key characteristics that distinguish cultural transmission from biological transmission. This book explores a number of questions concerning the nature and timing of the origins of human creativity. What were the driving factors in the development of new technologies? What caused the stasis in stone tool technological innovation in the Early Pleistocene? Were there specific regions and episodes of enhanced technological development or did it occur at a steady pace where ancestral humans lived? The authors are archaeologists who address these questions armed with data from ancient artefacts such as shell beads used as jewelry, primitive musical instruments, and sophisticated techniques required to fashion certain kinds of stone into tools. Providing state-of-the-art discussions that step back from the usual archaeological publications that focus mainly on individual site discoveries, this book presents the full picture on how and why creativity in Middle to Late Pleistocene archaeology/anthropology evolved. Gives a full original and multidisciplinary perspective on how and why creativity evolved in the Middle to Late Pleistocene. Enhances our understanding of the big leaps forward in creativity at certain times. Assesses the intellectual creativity of *Homo erectus*, *H. neanderthalensis*, and *H. sapiens* via their artefacts. *Stone Knapping* Valentine Roux, Blandine Bril, 2005 How were early stone tools made and what can they tell us about the development of human cognition? This question lies at the basis of archaeological research on human origins and evolution, and the present volume fulfils a growing need among advanced students and researchers working in this field. The individual chapters by a range of leading international scholars approach stone knapping from a multidisciplinary perspective that embraces psychology, physiology, behavioural biology, and primatology as well as archaeology. The skills and behaviour of humans and their primate relatives are key parts of the enquiry. The result is a better understanding of early human engagement with the material world and the complex actions required for the creation of stone tools. The book contains many illustrations and is extensively referenced and provides a landmark contribution in this field.
