Social BPM Keith D. Swenson,2011-01-01 Business Process Management and Workflow are by their very nature social activities The collaboration and communication patterns that are now increasingly referred to as social computing were also fundamental to the BPM and workflow models of the early 1990s Yet it has been the recent explosion of social computing and accompanying success of social production from Linux to Wikipedia and Facebook to Twitter which have had the most dramatic impact on collaboration in business environments Today we see the transformation of both the look and feel of BPM technologies along

the lines of social media as well as the increasing adoption of social tools and techniques democratizing process development and design It is along these two trend lines the evolution of system interfaces and the increased engagement of stakeholders in process improvement that Social BPM has taken shape

New anti-infective strategies for treatment of tularemia Max Maurin, 2014-11-21

Francisella tularensis the causative agent of tularemia is a paradigm among human pathogens This Gram negative bacterium has an intracellular lifestyle which probably reflects an adaptation to its natural animal and protozoa reservoirs This is one of the most infectious agents in humans and animals only a few bacteria are needed to induce a severe infection in both types of hosts The clinical presentation and severity of human tularemia varies according to the portal of entry of bacteria the bacterial inoculum the virulence of the infecting strain and the immune response of the host Although most infections occur after direct inoculation of bacteria through the skin through skin wounds or bites of arthropods pneumonia due to inhalation of infected aerosols is the most feared of the clinical forms of the disease particularly in the context of biological threat Two subspecies are responsible for tularemia *subsp tularensis* and *subsp holarctica* and several clades have been described for each which might be associated with changes in disease severity in humans Tularemia is also more severe in people with an impaired immune response No safe vaccine is currently available for prophylaxis of tularemia in humans On the other hand control of proliferation of *F tularensis* in wildlife is not feasible Thus only the anti infective agents are used for treatment and prophylaxis of human tularemia The standard options include aminoglycosides gentamicin tetracyclines eg doxycycline and fluoroquinolones eg ciprofloxacin The selection of acquired resistance to these antibiotics in *F tularensis* especially in the context of a biological threat may quickly limit the therapeutic options New prophylactic and therapeutic alternatives must be developed rapidly The present Research Topic focuses on potential new strategies for treatment of tularemia including the development and evaluation of new compounds having

proper antibacterial activity reducing the virulence of *F tularensis* or enhancing the immune host response **Optimization and Applicability of Bioprocesses** Hemant J. Purohit, Vipin Chandra Kalia, Atul N. Vaidya, Anshuman A. Khardenavis, 2018-01-02 This book argues that the sustainable management of resources requires a systematic approach that primarily involves the integration of green innovative biotechnological strategies and eco engineering It discusses how microbial community intelligence can be used for waste management and bio remediation and explains how biological processes can be optimized by integrating genomics tools to provide perspectives on sustainable development The book describes the application of modern molecular techniques such as fluorescence in situ hybridization FISH highly sensitive catalyzed reporter deposition CARD FISH in situ DNA hybridization chain reaction HCR and methods for detecting mRNA and or functional genes to optimize bioprocesses These techniques supplemented with metagenomic analysis reveal that a large proportion of micro organisms still remain to be identified and also that they play a vital role in establishing bioprocesses *Insights in Regulatory Science: 2021* Bruno Sepodes, Peter G.
