Elliptic Boundary Value Problems in the Spaces of Distributions Y. Roitberg,2012-12-06 This volume endeavours to
summarise all available data on the theorems on isomorphisms and their ever increasing number of possible applications It
deals with the theory of solvability in generalised functions of general boundary value problems for elliptic equations In the
early sixties Lions and Magenes and Berezansky Krein and Roitberg established the theorems on complete collection of
isomorphisms Further progress of the theory was connected with proving the theorem on complete collection of
isomorphisms for new classes of problems and hence with the development of new methods to prove these theorems The
theorems on isomorphisms were first established for elliptic equations with normal boundary conditions However after the
Noetherian property of elliptic problems was proved without assuming the normality of the boundary expressions this
became the natural way to consider the problems of establishing the theorems on isomorphisms for general elliptic problems
The present author s method of solving this problem enabled proof of the theorem on complete collection of isomorphisms for
the operators generated by elliptic boundary value problems for general systems of equations Audience This monograph will
be of interest to mathematicians whose work involves partial differential equations functional analysis operator theory and
