Serway,2002 **Holt Physics** ,2000-12 *Motion Estimation Algorithms for Video Compression* Borko Furht,Joshua Greenberg,Raymond Westwater,2012-12-06 Video technology promises to be the key for the transmission of motion video A number of video compression techniques and standards have been introduced in the past few years particularly the MPEG 1 and MPEG 2 for interactive multimedia and for digital NTSC and HDTV applications and H 2611H 263 for video telecommunications These techniques use motion estimation techniques to reduce the amount of data that is stored and transmitted for each frame This book is about these motion estimation algorithms their complexity implementations advantages and drawbacks First we present an overview of video compression techniques with an emphasis

to techniques that use motion estimation such as MPEG and H 2611H 263 Then we give a survey of current motion estimation search algorithms including the exhaustive search and a number of fast search algorithms An evaluation of current search algorithms based on a number of experiments on several test video sequences is presented as well The theoretical framework for a new fast search algorithm Densely Centered Uniform P Search DCUPS is developed and presented in the book The complexity of the DCUPS algorithm is comparable to other popular motion estimation techniques however the algorithm shows superior results in terms of compression ratios and video qUality We should stress out that these new results presented in Chapters 4 and 5 have been developed by Joshua Greenberg as part of his M Sc thesis entitled Densely Centered Uniform P Search A Fast Motion Estimation Algorithm FAU 1996 **Essential University Physics**
