Genetics Joins Evolutionary Theory

Gregor Mendel's original ideas on how hereditary information is passed:

- 1. Hereditary information that comes from parents are controlled by genes and that these genes have a hereditary basis in cells. The hereditary information is an individual's genotype. Genotype is the genetic information that is passed on to offspring.
- 2. Genes are passed on from one generation to the next. Genotype is a population's genes is a genetic group of genes, called a gene pool.
- 3. **Allele frequency**: is the number of copies of an allele in a gene pool. Allele frequency is the number of copies of an allele in a gene pool. Allele frequency is the number of copies of an allele in a gene pool. Allele frequency is the number of copies of an allele in a gene pool.

Examples of Genetic Variation Hereditary variation is passed on from one generation to the next. Genes are passed on from one generation to the next. Genes are passed on from one generation to the next. Genes are passed on from one generation to the next.

Single Gene and Polygenic Traits Hereditary information is passed on from one generation to the next. Genes are passed on from one generation to the next. Genes are passed on from one generation to the next. Genes are passed on from one generation to the next.

- 1. In single gene traits, the trait is controlled by one gene. An example is the trait of having a certain blood type.
- 2. In polygenic traits, the trait is controlled by more than one gene. An example is the trait of having a certain height.
