

**Bosch VP30 fuel injection pump****General description****Cautions:**

- Do not loosen the nut (A2) from the fuel injection pump. The fuel pump hub is fitted to the shaft in the factory to ensure that the fuel pump is in the correct position for timing. If the nut is loosened and the hub moves, the hub will need to be accurately fitted to the pump by use of specialist equipment before the pump can be fitted to the engine.
- A new fuel injection pump will be supplied with the pump shaft in the locked position. The drive shaft of the pump must not be turned without the spacer (B2) in position under the locking screw (B1). Before the crankshaft is turned, or the pump is fitted, put the spacer into position under the locking screw to ensure that the pump drive shaft is released.

The manufacturer fits the hub (A2) to the pump to ensure very accurate timing. These engines have the drive gear fastened to the hub instead of to the shaft of the pump.

The mounting flange has holes instead of slots to prevent incorrect adjustments to the engine timing by rotation of the fuel pump.

Accurate timing of the pump to the engine is by a pin (A1) used to align the fuel pump gear and the hub with a hole in the body of the fuel pump. The gear is passed over the pin and fastened to the hub with four flanged set screws and hardened washers.

An 'O' ring (B3) is fitted into a groove in the pump flange. This 'O' ring is fitted instead of a joint between the pump flange and the timing case.
