\* The governor spring for the R200 GP governor is located under group 12, Fig. 150 attached to the bottom of the governor housing on the right-hand side.

Revised in 1966 Service Kit

\* Governor weight (R200) is an adjustable threaded housing with spring loaded arm. The governor weight is screwed into the housing plate (16). The governor weight serves to control top exhaust flow of the engine.

\* Governor spring (13). Used for the adjusting screw (12). Used to eliminate surging at high idle. As low idle speeds, a spring (13) of the governor weight (16) causes the link adjusting the thrust plate bearing away from the governor (16) (assisted by the bumper spring (14)) thereby automatically increasing control valve travel.

\* Shut-off lever (17). The shut-off device consists of the shut-off lever (17), arm (15), spring (18) and weight (19). The shut-off lever (17) is at the bottom end of the housing plate (16) against the housing (20) which slides in a slot of the arm (15) mounted on the shaft (26) of the shut-off lever (26). The lever system by which the housing plate is driven on point (16) causes the control valve (15) to move to the right in the direction of "STOP". There is a flexible connection between the arm (15) and the shut-off lever shaft (26) which permits when the spring (18) contracts and the governor weight (16) shut off from being damaged. When the shut-off lever (17) is released, a return spring (17) forces it back into its original position or "RUN" position.
