**Excitation-Contraction Coupling and Cardiac Contractile Force** Donald Bers, 1993-08-31 The main aim of this monograph is to provide an overview of calcium regulation in cardiac muscle cells particularly with respect to excitation contraction coupling and the control of cardiac contractile force It is my hope that this book will be useful to students of the cardiovascular system and muscle at all different levels and in different disciplines such as physiology biochemistry pharmacology and pathophysiology I also hope that it will find use for those studying developmental comparative and disease processes as well as more integrative phenomenon I kept several goals in mind in writing this monograph First it should be easily readable Second I chose to include numerous illustrations and tables to help integrate results from numerous investigators in practical formats and also present key figures from important papers Thus this monograph may serve as a resource of information for people working in the areas described herein Third the presentation is a very personal one and I have necessarily drawn extensively on my personal experience in this field over the past 15 years This I think helps maintain a certain continuity of thought from chapter to chapter Fourth I have made serious attempts to make each chapter up to date despite the breadth of topics covered I have also tried to be equitable in choosing references while not intending to be

comprehensive or exhaustive Neither of these aims can be perfectly matched and I apologize to the many investigators whose papers I have not cited but should have     Struggle and Strife in Urban Bengal, 1937-47 Pranab Kumar Chatterjee,1991
