Bowman,2021-08-25 It s axiomatic to state that people fear what they do not understand and this is especially true when it comes to technology However despite their prevalence computers remain shrouded in mystery and many users feel apprehensive when interacting with them Smartphones have only exacerbated the issue Indeed most users of these devices leverage only a small fraction of the power they hold in their hands How Things Work The Computer Science Edition is a roadmap for readers who want to overcome their technophobia and harness the full power of everyday technology Beginning with the basics the book demystifies the mysterious world of computer science explains its fundamental concepts in simple terms and answers the questions many users feel too intimidated to ask By the end of the book readers will understand how computers and smart devices function and more important how they can make these devices work for them To complete the picture the book also introduces readers to the darker side of modern technology security and privacy concerns identity theft and threats from the Dark Web **Dr. Dobb's Journal** ,2002 **Stuck in the Shallow End** Jane Margolis,2008-08-15 The number of African Americans

and Latino as receiving undergraduate and advanced degrees in computer science is disproportionately low according to recent surveys And relatively few African American and Latino high school students receive the kind of institutional encouragement educational opportunities and preparation needed for them to choose computer science as a field of study and profession In *Stuck in the Shallow End* Jane Margolis looks at the daily experiences of students and teachers in three Los Angeles public high schools an overcrowded urban high school a math and science magnet school and a well funded school in an affluent neighborhood She finds an insidious virtual segregation that maintains inequality Two of the three schools studied offer only low level how to keyboarding cutting and pasting introductory computing classes The third and wealthiest school offers advanced courses but very few students of color enroll in them The race gap in computer science Margolis finds is one example of the way students of color are denied a wide range of occupational and educational futures Margolis traces the interplay of school structures such factors as course offerings and student to counselor ratios and belief systems including teachers assumptions about their students and students assumptions about themselves *Stuck in the Shallow End* is a story of how inequality is reproduced in America and how students and teachers given the necessary tools can change the system

SIGCSE Technical Symposium on Computer Science Education, 1986 Picturing Programs Stephen Bloch, 2010 A first programming course should not be directed towards learning a particular programming language but rather at learning to program well the programming language should get out of the way and serve this goal The simple powerful Racket language related to Scheme allows us to concentrate on the fundamental concepts and techniques of computer programming without being distracted by complex syntax As a result this book can be used at the high school and perhaps middle school level while providing enough advanced concepts not usually found in a first course to challenge a college student Those who have already done some programming e g in Java Python or C will enhance their understanding of the fundamentals unlearn some bad habits and change the way they think about programming We take a graphics early approach you'll start manipulating and combining graphic images from Chapter 1 and writing event driven GUI programs from Chapter 6 even before seeing arithmetic We continue using graphics GUI and game programming throughout to motivate fundamental concepts At the same time we emphasize data types testing and a concrete step by step process of problem solving After working through this book you'll be prepared to learn other programming languages and program well in them Or if this is the last programming course you ever take you'll understand many of the issues that affect the programs you use every day I have been using *Picturing Programs* with my daughter and there's no doubt that it's gentler than *HtDP* It does exactly what Stephen claims which is to move gradually from copy and change exercises to think on your own exercises within each section I also think it's nice that the worked exercises are clearly labeled as such There's something psychologically appealing about the fact that you first see an example in the text of the book and then a similar example is presented as if it were an exercise but they just happen to be
