

CONCEPTUAL Physics PRACTICE PAGE**Chapter 17 Change of Phase**
Ice, Water, and Steam

All matter can exist in the solid, liquid, or gaseous phases. The solid phase normally exists at relatively low temperatures, the liquid phase at higher temperatures, and the gaseous phase at still higher temperatures. Water is the most common example, not only because of its abundance but also because the temperatures for all three phases are common. Study "Energy and Changes of Phase" in your textbook and then answer the following:

1. How many calories are needed to change 1 gram of 0°C ice to water?

2. How many calories are needed to change the temperature of 1 gram of water by 1°C ?

3. How many calories are needed to melt 1 gram of 0°C ice and turn it to water at a room temperature of 23°C ?

4. A 50-gram sample of ice at 0°C is placed in a glass beaker that contains 200 g of water at 20°C .

a. How much heat is needed to melt the ice?

b. By how much would the temperature of the water change if it gave up this much heat to the ice?

c. What will be the final temperature of the mixture? (Disregard any heat absorbed by the glass or given off by the surrounding air.)

5. How many calories are needed to change 1 gram of 100°C boiling water to 100°C steam?

Josiah-Willard Gibbs, by P. Duhem Frederick George Donnan, Arthur Erich Haas, 1980 Defining an Identity P.J. Fensham, 2004-04-30 Research in science education is now an international activity This book asks for the first time Does this research activity have an identity It uses the significant studies of more than 75 researchers in 15 countries to see to what extent they provide evidence for an identity as a distinctive field of research It considers trends in the research over time and looks particularly at what progression in the research entails It provides insight into how researchers influence each other and how involvement in research affects the being of the researcher as a person It addresses the relation between research and practice in a manner that sees teaching and learning in the science classroom as interdependent with national policies and curriculum traditions about science It gives graduate students and other early researchers an unusual overview of their research area as a whole Established researchers will be interested in and challenged by the identity the author ascribes to the research and by the plea he makes for the science content itself to be seen as problematic **Addison-Wesley**

such as chatGPT have been used to generate teaching materials or assessment tasks across different subjects. The field's understanding of the effects of the use of LLM based applications in classroom teaching however is still in its infancy. GAI tools may help solving a range of tasks in education in particular with respect to teachers and students and teachers efforts to generate content. However it is critical that teachers and students do not overly rely on GAI generated solutions but instead critically assess each solution. Students should furthermore not use GAI tools to avoid investing relevant mental effort to create mental models or more broadly build up competencies.

Learning and Instruction Richard E. Mayer, 2003. How do people learn? How can instruction promote learning? This new book by a noted scholar thoroughly and succinctly answers these two fundamental educational psychology questions. The author focuses on the big ideas preferring that readers understand a few exemplary ideas deeply rather than numerous ideas superficially. The book uses clear definitions, concrete examples and a conversational writing style that easily engages readers by addressing them directly. Coverage is organized around two sides of the educational coin: learning in subject areas and instructional methods that foster meaningful learning and explaining what research says about the learning teaching process. For professionals in the field of Education Psychology
