

Review questions

2. What two units of measurement are necessary for describing speed?

Ans. Distance and time.

3. What kind of speed is registered by an automobile speedometer?

Ans. Instantaneous speed.

5. What is the average speed in kilometers per hour for a horse that gallops a distance of 15 km in a time of 30 min?

Ans. $\frac{15\text{km}}{\frac{1}{2}\text{hr}} = 30 \frac{\text{km}}{\text{hr}}$

6. How far does a horse travel if it gallops at an average speed of 25 km/hr for 30 min.?

Ans. Our distance rule is given by $\Delta X = V_o t + \frac{1}{2} a t^2$. Since there is no acceleration, the rule simplifies to $\Delta X = V_o t = 25 \frac{\text{km}}{\text{hr}} (.5\text{hr}) = 12.5\text{km}$

7. Distinguish between speed and velocity.

Ans. Speed is the rate at which an object changes its position. Velocity is the speed and direction of an object.

8. If a car moves with constant velocity, does it also move with constant speed?

Ans. Yes.

9. If a car is moving at 90 km/hr and it rounds a corner, also at 90 km/hr, does it maintain a constant speed? A constant velocity?

Ans. It maintains a constant speed but its velocity is changing because its direction of travel is changing.

10. Distinguish between velocity and acceleration.

Ans. Velocity is the speed and direction of an object. Acceleration is the rate at which an objects changes its velocity.

11. What is the acceleration of a car that increases its velocity from 0 to 100 km/hr in 10 seconds?

Ans. $a = \frac{\Delta V}{\Delta t} = \frac{V_f - V_i}{\Delta t} = \frac{100\text{km/hr}}{10\text{sec}} = \frac{10\text{km/hr}}{\text{sec}}$ forward.

Conceptual Physics Chapter 3review Answers:

From Atoms to Galaxies Sadri Hassani, 2011-06-13 College students in the United States are becoming increasingly incapable of differentiating between proven facts delivered by scientific inquiry and the speculations of pseudoscience. In an effort to help stem this disturbing trend *From Atoms to Galaxies: A Conceptual Physics Approach to Scientific Awareness* teaches heightened scientific acuity as it educates students about the physical world and gives them answers to questions large and small. Written by Sadri Hassani, the author of several mathematical physics textbooks, this work covers the essentials of modern physics in a way that is as thorough as it is compelling and accessible. Some of you might want to know: How did Galileo come to think about the first law of motion? Did Newton actually discover gravity by way of an apple and an accident? Or maybe you have mulled over: Is it possible for Santa Claus to deliver all his toys? Is it possible to prove that Elvis does not visit Graceland every midnight? Or perhaps you've even wondered: If ancient Taoism really parallels modern physics? If psychoanalysis can actually be called a science? How is it that some philosophies of science may imply that a 650-year-old woman can give birth to a child? No Advanced Mathematics Required. A primary textbook for undergraduate students not majoring in physics, *From Atoms to Galaxies* examines physical laws and their consequences from a conceptual perspective that requires no advanced mathematics. It explains quantum physics, relativity, nuclear and particle physics, gauge theory, quantum field theory, quarks and leptons, and cosmology. Encouraging students to subscribe to proven causation rather than dramatic speculation, the book defines the often-obscured difference between science and technology, discussing how this confusion taints both common culture and academic rigor. Explores the various philosophies of science, demonstrating how errors in our understanding of scientific principles can adversely impact scientific awareness. Exposes how pseudoscience and New Age mysticism advance unproven conjectures as dangerous alternatives to proven science. Based on courses taught by the author for over 15 years, this textbook has been developed to raise the scientific awareness of the untrained reader who lacks a technical or mathematical background. To accomplish this, the book lays the foundation of the laws that govern our universe in a nontechnical way, emphasizing topics that excite the mind, namely those taken from modern physics and exposing the abuses made of them by the New Age gurus and other mystagogues. It outlines the methods developed by physicists for the scientific investigation of nature and contrasts them with those developed by the outsiders who claim to be the owners of scientific methodology. Each chapter includes essays which use the material developed in that chapter to debunk misconceptions, clarify the nature of science, and explore the history of physics as it relates to the development of ideas. Noting the damage incurred by confusing science and technology, the book strives to help the reader to emphatically demarcate the two while clearly demonstrating that science is the only element capable of advancing technology.
